INTRODUCTION.

THIS work has grown out of a want, which was much felt by the author, of some method which would simplify the study of our native plants, by placing before the student the characteristic distinctions of their Natural Orders and Genera in a clearer and more striking manner than is possible by means of verbal description alone; and which would at the same time possess in itself the principles and advantages of analytical arrangement.

In botanical letter-press description, the recurrence of numerous technical terms, unaided by illustrations, is always a difficulty, and frequently a source of discouragement to beginners; the usual method of acquiring a knowledge of these terms being very laborious; and the consequence is, that the attempt to master it is often abandoned.

And even when the description is accompanied by full illustrations of the individual plant, there is the danger of undue attention being devoted to the latter, to the neglect of the descriptions of the Ordinal and Generic features. The student is too often satisfied if he can apparently identify his specimens by a general resemblance to the illustrations, even though he may gain little or no knowledge of the reasons for their classification.

With a view to obviate these objections, and to supply the

want referred to, the author has adopted a new method of utilizing illustrative figures. These figures represent the separate parts or dissections, characteristic of the Orders and Genera, and are disposed in harmony with verbal analytical arrangement: they form in fact a series of illustrated analytical tables; the application of this principle to the figures, and the combination of verbal and pictorial analysis being the special features of this work.

That illustrations are a more powerful, as well as a more alluring and ready means of imparting knowledge, than letter-press alone, will not be doubted. As the eye travels rapidly over the illustrated page, it takes in at one view the contents, and there is presented to the mind a comprehensive idea of the subject. So with regard to this work, a few references to an illustrated analytical table will go far to familiarize the mind with the relationship which exists between the various parts of the plants; and the impression produced will soon deepen and become fixed on the memory. This pictorial method resembles, more closely than any other, the natural process, or that which is intuitively followed in the comparative examination of the parts of the plants themselves.

For a full explanation of any of the figures, the student will refer to the complete description, formed on the principle of the usual analytical method, which accompanies each illustrated page.

It will, on the first occasion of consulting an analysis, be advantageous to refer freely to both pages, in order that the exact meaning of the illustrations may be acquired.

With regard to the variations in form, which exist in the corresponding parts of plants of the same Order or Genus, it must be borne in mind that a form which appears to be the most typical has been chosen for illustration. As the figures given are typical of Orders and Genera only, the student must not necessarily expect to find strict identity, but may

have to seek for the form most nearly approaching that of the plant under examination; the judgment being allowed to range among the various forms most allied to the plant, without being limited to discovering one identical in all respects. As, for example, in the case of cross sections of seed vessels, which in a great many instances illustrate the general structure only.

A few symbolical illustrations, principally in the Divisional and Ordinal headings, have been introduced; these are fully explained in the list given at page 12, but they are in most instances so characteristic of the parts they represent, as to speak for themselves. In cases where an illustration includes a considerable variation of outline, the symbolical figure is used: where the form is of importance, the typical configuration is given. This mingling of symbolical with typical forms leads to no perplexity, the symbolical being readily distinguished as representatives only of the parts.

The course to be taken in tracing a plant through the illustrated divisional spaces may be explained as follows. The characters of any one illustrated space are common to the Orders or Genera which are found directly to the right of that space. In testing a plant, therefore, after finding that its parts agree generally with those under a particular heading, compare it with the illustrations in the uppermost space of the first column, then with those in the space immediately beneath, and so on down the column, taking the spaces in consecutive order, until one be found whose contents most closely agree with the corresponding part of the plant. Then, passing to the uppermost of the spaces which are immediately to the right of the last found space, compare the illustrations with the specimen, and proceed in like manner down the whole of those spaces, until one be met with whose contents correspond most closely with the plant. From this last-named space proceed to the next column, and so on, until the Order or Genus be reached.

Take, as an example, the common corn poppy: beginning at the analysis of Classes, at page 14, it is there found to be a flowering plant, and that it belongs to Class I., Exogens. Passing to the analysis of Divisions, at page 16, it is seen that it comes under Division I.; turning to the analysis of Orders, which commences at page 18, observe at page 20 the second heading, with some of the characters in which, it will be seen that the plant agrees. Then, testing the specimen by the analysis beneath this heading, it is found to coincide (1) with the contents of the second space of the first column; (2) with those in the lowest space of the second column; (3) with the figure in the second of the five spaces in the third column, adjoining the space last named; and (4) with the figure in the space to the right of the one last referred to. The conclusion, therefore, is that the plant belongs to Order 4, Papaveraceæ.

On referring to this Order in the analysis of Genera, at page 42, and comparing the specimen with the heading and with the analysis beneath it, it is seen that it accords with the figures in the uppermost spaces in the first, second, and third columns, thus showing that it belongs to the Genus Papaver, or Poppy.

A chart, at page 124, illustrating by the length of a black line the number of species in each order, furnishes the student with a comparative view of the relation which the Orders bear to each other in this respect.

To enable him to ascertain what species are included under each Order or Genus, a catalogue in accordance with the classification followed in this work is given at page 125: the arrangement corresponds closely with Professor Babington's 'Manual of British Botany,' and in the selection of species it nearly coincides with Sir J. D. Hooker's 'Student's Flora.' Sub-species are not given, their introduction being foreign to the object with which the catalogue has been prepared.

In carrying out this work the British Genera alone have been taken into consideration, and for the purpose of discrimination any prominent or characteristic feature has been selected. The illustrations simply indicate the form, and have no relation to the actual or relative size of the parts.

To his friend Mr. G. S. Penson, of Plumstead, the author returns his sincere thanks for many valuable suggestions made during the progress of the work, and for revising the manuscript and proof-sheets.

GLOSSARY.

A compound word, such as "ovate-lanceolate," means a form intermediate between the two.

- ACCUMBENT**; having the edges of the cotyledons applied to the radicle.
- ACHENE**; a dry, simple, indehiscent fruit.
- ACUMINATE**; tapering to a point.
- ADNATE**; united throughout its length to another organ.
- ALBUMEN**; the nutritious matter contained in a seed for the sustenance of the young plant arising therefrom in its first stage of growth.
- ALTERNATE**; attached to opposite sides, but not opposite to each other.
- ANGULAR**; with angles or edges more or less projecting.
- ANTHER**; the part of the stamen which contains the pollen.
- APEX**; the extremity furthest from the point of attachment.
- ASCENDING**; curved upwards.
- AWN**; a long bristle-like midrib, as the beard of Barley.
- AXIL**; the angle formed by the union of the stem and leaf.
- AXILLARY**; growing from the axil.

- BEAK**; a pointed projection.
- BEARDED**; having a long tuft of hairs like a beard.
- BERRY**; a fleshy or pulpy fruit containing several seeds.
- BIFID**; cleft half-way down.
- BIPARTITE**; cleft nearly to the base.
- BRACTS**; small leaves on the inflorescence.
- BRISTLES**; stiff hairs.
- BULB**; underground leaf-buds with fleshy scales.

- CALYX**; the outer whorl of floral leaves, usually green, the separate pieces of which are called sepals.
- CAMPANULATE**; bell-shaped.
- CAPITATE**; growing in heads or very close clusters.
- CAPSULE**; a dry, dehiscent, seed-vessel; generally many-seeded.
- CARPEL**; a modified leaf; one of the segments of an ovary or capsule.
An ovary may consist of one carpel only.
- CATKIN**; a unisexual spike of crowded flowers in bracts.
- CHANNELLED**; grooved like a gutter.
- CIRCINATE**; rolled up like a crosier.
- CLAW**; the long narrow lower portion of the petal of some flowers.
- CLAWED**; (petal) having a long narrow base.
- CLEFT**; deeply divided, nearly to the midrib.
- CLUSTER**; an apparently promiscuous collection of similar parts; in Ferns the patches of capsules.
- COHERING**; united together.
- COMMISSURE**; the inner sides of the carpels of Umbelliferæ, in contact with each other.
- COMPRESSED**; flattened laterally.
- CONDUPPLICATE**; folded lengthwise.
- CONE**; the fruit of a Fir-tree.
- CONICAL**; shaped like a sugar-loaf.
- CONNATE**; when two like parts (as leaves) are connected at their bases.
- CONVERGING**; the ends or points gradually approaching.

CORDATE; heart-shaped, with the point of attachment between the lobes.
COROLLA; the whorl of floral leaves between the calyx and stamens, usually coloured, the separate pieces of which are called petals.

CORYMB; a raceme in which the stalks of the flowers are so proportioned in length that the flowers all come to nearly the same level.

CORYMBOSE; having the form of a corymb.

COTYLEDONS; the seed lobes; the rudimentary leaves of an embryo which develop into the first leaves of the young plant.

CRENATE; with convex marginal teeth.

CYLINDRICAL; terete; in the form of a cylinder. Example, the stems of Grasses.

CYME; a form of inflorescence in which the central flowers open first, and the others in succession; usually in appearance like an umbel, but with branched stalks, as in the Elder.

DECIDUOUS; falling off; said of organs which ultimately detach themselves after fulfilling their functions.

DENTATE; toothed.

DICHOTOMOUS; forked; branching in pairs.

DIDYMOUS; twin; growing in pairs. Example, the fruit of the Galium.

DIDYNAMOUS; having 4 stamens, 2 of which are longer than the others.

DIEXIOUS; having the male and female flowers produced on different plants.

DISK; the thickened or fleshy part to which the stamens and pistils are attached; or the annular or scaly elevation between them; the central part of a head in Compositæ, consisting of tubular florets.

DISSEPIMENTS; divisions in the ovary; septa.

DORSAL; belonging to the back.

DRUPE; a fleshy fruit, superior, containing a 1- or 2-seeded stony nut.

ELLIPTIC; oval, but with more acute ends.

EMARGINATE; notched at the end.

EMBRYO; the rudimentary plant contained in the seed.

ENTIRE; having no marginal lobes or teeth.

ERECT; standing perpendicular from its base.

EXSTIPULATE; without stipules.

FAMILY; (= Order) a group of plants composed of allied genera.

FIBRE; a thread-like kind of structure.

FIBROUS; composed of fibres.

FILAMENT; the stalk of an anther.

FILIFORM; slender, like a thread.

FLORETS; the individual flowers contained in the head of a Composite flower, or in the spikelet of a Grass or Sedge.

FOLLICLE; a fruit formed of a single carpel; 1-celled, opening on one side only, and containing many seeds.

FORKED; divided like the prongs of a fork.

FREE; unconnected except at the base.

FROND; the leaf-like part of a Fern.

FRUIT; the matured seed-vessel.

GIBBOSUS; swollen.

GLABROUS; having a smooth surface, without hairs or other appendages.

GLAND; a wart-like secreting swelling.

GLANDULAR; having glands.

GLAUCOUS; covered with a bloom like the grape.

GLOBOSE; } spherical, or nearly so.

LOBULAR; } spherical, or nearly so.

GLUMES; the exterior series of the bracts which constitute the flower of a Grass, i. e. the bracts enclosing the spikelets of flowers; the imbricated bracts enclosing the flowers of Sedges.

GRANULATED; having a rough surface, as if formed of grains.

HASTATE; in the form of a halbert; having two diverging lobes, one on each side of the base of the leaf.

HEAD; a close collection of flowers surrounded by an involucre.

HERB; a plant with an annual stem.

HERMAPHRODITE; having both sexes (stamens and pistils) in the same flower.

HOODED; arched like a cowl.

HYPOGYNOUS; attached below the base of the ovary, and not on the calyx.

IMBRICATE; overlapping each other, like the tiles of a roof.

INCUMBENT; said of an embryo when the radicle is folded down upon the back of the cotyledons.

INDUSIUM; a thin membrane covering the clusters of capsules in Ferns.

INFERIOR; a calyx, corolla, or perianth is said to be inferior when it is attached below the ovary and free from it. The ovary is said to be inferior when it is attached below the flower, which latter, therefore, stands upon the ovary.

INFLEXED; curved inwards.

INFLORESCENCE; the general arrangement of the flowers.

INSERTED; attached to, growing upon.

INVOLUCRE; the ring of bracts at the base of a head or umbel; or below the calyx in a simple flower. A partial involucre is the involucre at the base of a partial umbel; a general involucre is the involucre at the base of a general umbel.

IRREGULAR; having the lobes unequal; wanting regularity or symmetry in form.

KEEL; a prominent ridge. In the Pea-flower the two connected petals.

LABIATE; an irregular monopetalous corolla, with two lips and an open throat.

LANCEOLATE; narrowly elliptical and tapering at each end.

LEAFLET; one of the divisions of a compound leaf.

LEGUME; a 1-celled seed-vessel, with two valves and the seeds attached to the ventral suture.

LINEAR; very long and narrow, with the sides parallel, or nearly so.

LIPS; the principal lobes or portions of a corolla or a calyx.

LOBES; the large segments of a leaf, or the segments of a corolla or calyx.

N.B.—In this work, when the word "lobe" is applied to the free parts or divisions of the floral leaves composing a calyx, corolla, or perianth, it includes those free parts or divisions without regard to the length they may bear to the whole length of the organ of which they form part.

LYRATE; a pinnatifid leaf with one large terminal lobe and several smaller lateral lobes.

MEMBRANOUS; thin and pliant; semi-transparent.

MONILIFORM; like a string of beads.

MONOPETALOUS; having the petals united at their bases so as to be in one piece.

MUCRONATE; abruptly terminating in a short point.

MUCUS; a viscid fluid.

NUT; a hard, dry, 1-seeded superior fruit; or a hard, dry, 1- or few-seeded fruit (indehiscent) seated in an involucre. Example, Hazel-nut.

OB; in composition means that the thing signified is inverted, as an *obcordate* leaf is a cordate leaf attached by its narrow end, like the leaflets of the white clover.

OBlique; unequal sided.

OBlong; a long obtuse ellipse.

OPPOSITE; leaves in pairs placed opposite to each other, or in a flower, the organs of a different whorl placed the one in front of the other.

ORBICULAR; circular, or nearly so.

OVARY; the seed-vessel in a young or immature state.

OVATE; egg-shaped (flat), attached by its broader end.

OID; egg-shaped (solid).

PALEÆ; the scales in a Grass immediately enclosing the stamens, pistils, and hypogynous scales.

PALMATE; a leaf or a tuber with its lobes disposed or spreading in the manner of the fingers of a hand.

PANICLE; a raceme with branched pedicels.

PAPILIONACEOUS; butterfly-shaped, like the flower of a Pea.

PAPPUS; the hairs or scales which crown the fruit of Composite plants.

PARASITE; a plant that grows upon, and receives its nourishment from, another plant.

PARIETAL (placenta); when the ovules or seeds are attached to the inner surface or lining of an ovary or seed-vessel.

PATENT; spreading widely.

PECTINATE; pinnatifid, with the segments very narrow and parallel.

PEDICEL; the branch of a peduncle; the particular stalk of each flower.

PELTATE; a leaf circular or nearly so in outline, with its stalk attached at or near the centre.

PENDULOUS; seeds hanging from the top of an ovary or seed-vessel.

PERFORATE; when the leaf surrounds the stem so that the latter appears to pass through it.

PERIANTH; the floral whorl in which the calyx and corolla are not readily distinguished the one from the other.

PERIGYNOUS; having the corolla and stamens attached to the calyx, but free from the ovary.

PERSISTENT; not falling off, even when withered.

PERSONATE; an irregular monopetalous 2-lipped corolla, with its lips close compressed.

PETALS; the separate pieces or divisions of a corolla.

PETIOLE; the stalk of a leaf.

PINNÆ; the segments of a pinnate leaf.

PINNATE; when the leaflets are arranged on opposite sides of a common stalk. A leaf is 2- or 3-pinnate when its first and second divisions are pinnate.

PINNATIFID; when the leaf is deeply cleft in a pinnate manner, but not divided quite to the midrib.

PINNULÆ; the segments of a bipinnate leaf.

PISTIL; the female organ of flowering plants, usually consisting of ovary, style, and stigma.

PLACENTA; the part of the ovary or seed-vessel to which the ovules or seeds are attached.

POD; a 1-celled, 2-valved seed-vessel, with the seeds attached along the ventral suture.

POLYGAMOUS; having male, female, and hermaphrodite flowers on the same plant.

POLYPETALOUS; having the corolla composed of separate petals.

POME; an apple or similar fruit.

PORES; small roundish openings or holes.

PRICKLES; sharply-pointed conical elevations arising from the epidermis, not from the wood.

PRICKLY; having prickles.

PUBESCENCE; closely adpressed short and soft hairs.

PUBESCENT; having the surface covered with short and soft hairs.

QUADRANGULAR; (stem) 4-angled or 4-sided.

QUINATE; having the parts arranged in fives.

RACEME; an inflorescence in which the flowers are arranged singly on distinct pedicels along a common axis, as in the Red Currant; a spike with stalked flowers.

- RACHIS**; the central stalk of some kinds of inflorescence; in Grasses, the main stalk to the spikelets; the midrib above the lowest pinnæ in the fronds of Ferns.
- RADIATE**; having the parts diverging like rays.
- RADICAL**; (leaves) springing from the crown of the root.
- RAMOSE**; stem or branch divided into many branches.
- RAYS**; parts diverging from a centre, and forming a circular outline like the spokes of a wheel.
- RECURVED**; curved gradually backwards.
- REFLEXED**; bent quite back.
- RENIFORM**; kidney-shaped.
- REVOLUTE**; rolled back.
- RHIZOME**; a prostrate rooting stem, growing more or less underground.
- RIBS**; prominent veins.
- RINGENT**; a term applied to an irregular 2-lipped gaping corolla.
- ROOTSTOCK**; a rhizome or tuber.
- RUNCINATE**; a pinnatifid leaf, with the lateral lobes pointing backward toward the base.
- SACCATE**; having a bag or pouch.
- SAGITTATE**; shaped like an arrow-head.
- SALVER-SHAPED**; a monopetalous corolla with a flat limb and a long tube.
- SAMARA**; a dry indehiscent winged fruit.
- SCARIOUS**; thin, dry, and semi-transparent.
- SECUND**; all turned in one direction.
- SEED**; the reproductive body containing the embryo of the new plant.
- SEPALS**; the separate pieces or divisions of the calyx.
- SERRATE**; toothed like a saw, teeth pointing forward.
- SESSILE**; without a stalk.
- SETACEOUS**; bristle-like.
- SHEATH**; the lower part of a leaf or its stalk which wraps round the stem.
- SIMPLE**; in one piece; not compound nor branched.
- SINUATE**; } having a waved outline like an oak leaf.
SINUOS; }
- SORI**; the patches or clusters of capsules on the back of the fronds of Ferns.
- SPADIX**; a succulent spike enclosed in a spathe.
- SPATHE**; a large bract enclosing an inflorescence.
- SPATHULATE**; battle-axe-shaped.
- SPIKE**; a long simple peduncle, with sessile flowers.
- SPIKELET**; the secondary spike of Grasses.
- SPINE**; a stiff, sharp, woody thorn.
- SPINOUS**; having spines.
- SPUR**; a tubular horn-shaped projection from the lower part of a petal or monopetalous corolla or calyx.
- STAMEN**; the male organ of a flower containing the pollen.
- STIGMA**; that part (generally the upper portion) of the style to which the pollen adheres.
- STIPE**; the stalk of Ferns.
- STIPULES**; more or less leaf-like appendages at the base of a leaf-stalk.
- STRIPES**; the vittæ of Umbellifers; the oil receptacles in the fruit.
- STYLE**; the portion of the pistil between the ovary and the stigma; when absent the stigma is sessile.
- SUB**; a prefix, meaning a near approach to.
- SUBLATE**; awl-shaped, tapering from the base to a fine point.
- SUPERIOR**; above another part; a calyx is superior when its tube is wholly attached to the ovary; a corolla or a perianth is superior when it is attached to the upper part of the ovary; an ovary is superior when it is free within the flower, the latter being attached beneath it.
- SUTURE**; the line of junction of two similar parts or organs.
- TENDRIL**; a twining, slender, thread-like organ by which some plants support themselves.
- TEREDE**; circular in cross section, or nearly so.

TERMINAL; at the end.

TERNATE; arranged in threes.

THORN; an abortive branch, differing from the prickle by being in continuity with the wood of the stem.

THROAT; the mouth of the tube of a corolla or calyx.

TRIANGULAR; (stem) 3-angled and 3-sided.

TRUNCATE; with an abrupt end, as if cut off.

TUBE; (corolla) the tubular part of a monopetalous corolla.

TUBER; a swollen underground part of the stem.

TUBERCLES; warts.

TUBEROUS; like a tuber.

TUNIC; a flask-shaped loose covering.

TURBinate; top-shaped.

UMBEL; an inflorescence in which the pedicels proceed from the same point and the flowers all reach about the same level.

UNILATERAL; directed to one side.

URCEOLATE; pitcher-shaped.

VALVATE; touching each other by the margins only.

VALVES; the distinct portions of a seed-vessel which open like doors.

VERNATION; the disposition of the leaves in the bud.

VERSATILE; swinging freely from its point of attachment.

VILLOUS; covered with soft hair.

VITÆ; oil ducts or canals in the fruit of Umbellifers.

WEDGE-SHAPED; (leaf) when like a wedge and attached at its point.

WHORL; a ring of similar organs around an axis.

WHORLED; arranged in whorls.

WINGED; (seed) a membranous border; (stem) a deep ridge or border.

SYMBOLICAL ILLUSTRATIONS.

	— Style.		— Calyx.
	— Stamen.		— Superior ovary.
	— Petal.		— Inferior ovary.
	— Corolla-lobe.		— Dry fruit, 1- or 2-celled.†
	— Sepal.		— Succulent fruit, 2-celled.
	— Calyx-lobe.		— Herb.
	— Perianth-lobe.		— Shrub.
	— Regular* polypetalous corolla.		— Tree.
	— Irregular polypetalous corolla.		— Male.
	— Regular* monopetalous corolla.		— Female.
	— Irregular monopetalous corolla.		— Hermaphrodite.
	— Regular* corolla-like † perianth.		— Monoeious.
	— Irregular corolla-like perianth.		— Dioecious.
	— Calyx-like † perianth.		— Water.

ABBREVIATIONS.

FLOWERING PLANTS. (^{STAMENS AND PISTILS EITHER}
^{OR BOTH PRESENT.})

	CLASS I. EXOGENS.	CLASS II. ENDOGENS.
1	Stem, when perennial, formed of bark, wood, and pith; having medullary rays; and increasing externally by concentric layers.	Stem without distinct bark, wood, and pith; consisting of cellular tissue with vascular bundles embedded irregularly in it.
2	Embryo with 2 (or more) cotyledons.	Embryo with 1 cotyledon.
3	Sepals, petals, and stamens, 2, 5, or their multiples.	Perianth-lobes and stamens 3 or its multiples.
4	Leaves net-veined.	Leaves parallel-veined.
5	Leaves either entire, toothed, lobed, pinnate, or variously divided.	Leaves entire.
6	Leaves alternate or opposite.	Leaves alternate.
7	Leaves articulated with the stem and deciduous.	Leaves in one with the stem and persistent.
8	Leaves with or without stipules.	Leaves without stipules.
9	Herbs, shrubs, or trees.	Herbs.
10	Stem simple or branched.	Stem simple.

Corolla polypetalous, inferior.
^{1st} Trees or Shrubs.

Dicotious. Stamens 3. Style 1, stigma 9-rayed.	FAMILY.
Leaves linear-oblong.	
Petals 3. Sepals 3. Ovary 9-celled, cells 1-seeded.	71. Crowberry.
Berry 1-celled, many-seeded	
Dicotious. Stamens 4. Styles 4, partly united.	24. Buckthorn.
Leaves ovate, finely serrated.	
Sepals 4. Stamens 4, opposite the petals.	
Berry 4-celled, cells 1-seeded	24. Do.
Stamens 4 or 5 (hermaphrodite).	
Leaves obovate, entire.	23. Spindle-tree.
Style 1. Stamens 5, opposite the petals.	
Berry 2-celled, cells 1-seeded	28. Tamarisk.
Leaves ovate-lanceolate or pinnate, toothed.	
Styles 1 or 2. Stamens 4 or 5, alternating with the petals. Capsule 2- or 4-celled, 4-seeded..	2. Barberry.
Leaves minute, scale-like.	
Styles 3, thick. Stam. 5. Cap. 1-celled, many-seeded	
Stamens 6.	18. Maple.
Leaves obovate, sharply toothed.	
Stamens opposite to the petals; anthers opening by valves attached to the top.	
Berry oblong, 2- or 3-seeded	25. Peaflower.
Stamens about 8.	17. St. John's Wort.
Leaves lobed, opposite.	
Fruit winged, 2-celled, cells 1- or 2-seeded	15. Mallow.
Stamens 10, in one set.	
Leaves awl-shaped, lanceolate, or ternate.	8. Rock-rose.
Flowers irregular, papilionaceous. Fruit a legume, with the placenta on the upper suture	
Stamens many, in 3 or 5 sets.	16. Lime.
Leaves varying from linear to ovate; entire, opposite.	
Styles 3 or 5. Flowers yellow.	26. Rose.
Capsule 3- or 5-celled, cells many-seeded	
Stamens many, in 1 set.	26. Do.
Leaves lobed, stipulate, alternate.	
Sepals valvate in the bud. Styles many, partly united.	26. Do.
Fruit 8- to 20-celled, cells 1-seeded	
Stamens many, filaments free.	
Leaves varying from linear to ovate; entire, opposite.	
Calyx of 3 large and 2 or 0 small sepals.	
Capsule imperfectly 3-celled, seeds several ..	
Leaves obliquely cordate, with deciduous stipules.	
Sepals valvate in the bud. Flowers on a bract.	
Ovary 6-celled, cells 2-seeded. Fruit 1- or 2-seeded	
Leaves varying from lanceolate to ovate, toothed, with deciduous stipules.	
Fruit a drupe (a cherry or plum)	
Leaves ternate or quinate, toothed, stipulate.	
Fruit, granulated, consisting of many small drupes	
Leaves pinnate, toothed, stipulate; leaflets 5 to 9.	
Fruit many hairy nuts enclosed in a fleshy calyx-tube

DIV. IV. { Flowers with both calyx and corolla.
Corolla monopetalous, inferior.

Trees or shrubs.	FAMILY.
Stamens 2.	
Corolla valvate in the bud. Berry 2-celled, cells 1- or 2-seeded	49. Jessamine.
Stamens 4 or 5.	
Corolla imbricate in the bud. (See No. 47.) Fruit fleshy; seeds stony, 4 (or 5)	48. Holly.
Stamens 8 or 10.	
Anthers opening by pores, with or without awns. Fruit a 3- to 5-celled capsule, or a 4- to 5-celled berry; cells many- (rarely 1-) seeded	47. Heath.
Herbs. Corolla irregular.	
Stamens 8, in 2 clusters.	
Sepals irregular, 2 inner large, petal-like. Capsule 2-celled, cells 1-seeded	12. Milkwort.
Stamens 3.	
Calyx of 2 sepals. Capsule 1-celled, 3-seeded ..	32. Purslane.
Stamens 2.	
Corolla spurred. Capsule 1-celled, many-seeded; placenta, free, central	60. Butterwort.
Stamens 4, didynamous (2 longer than the 2 others).	
Leaves none (scales). Capsule 1-celled, many-seeded; placentas 2, parietal	56. Broomrape.
Style from the top of the 4-lobed ovary. Flowers in a slender spike.	
Capsule separating into 4 1-seeded nuts	59. Vervain.
Stamens 4, didynamous, or 2 or 5.	
Style from the base of the 4-lobed ovary. Stem square.	
Leaves opposite. Capsule separating into 4 1-seeded nuts	58. Labiate.
Style terminal. Leaves alternate or opposite.	
Capsule 2-celled, cells many- or 2-seeded	57. Figwort.
Herbs. Corolla regular.	
Stamens opposite to the lobes of the corolla.	
Stamens 4, 5, or 7. Style 1, stigma capitate. Capsule 1-celled, many- (or few-) seeded; placenta, free, central	61. Primrose.
Leaves radical (various).	
Stamens 4, corolla 4-lobed. Style 1.	
Capsule 1- to 4-celled, cells 1-seeded; or 2-celled, cells 4- to 8-seeded	63. Plantain.
Stamens 5. Styles 5. Capsule 1-celled, 1-seeded	
Leaves opposite (various).	
Stamens 5, filaments bent. Stigma capitate, with a ring at the base. Follicles 2, several-seeded ..	62. Thrift.
Stamens 4, 5, or 8. Capsule 1- or 2-celled, by the inflexed margin of valves; many-seeded	50. Periwinkle.
Stamens 5.	
Style 1, stigmas 2; or styles 2.	51. Gentian.
Capsule 4-seeded, 1- or 2-celled	53. Convolvulus.
Style 1, stigmas 3. Stamens unequal.	
Capsule 3-celled, many-seeded	52. Jacob's Ladder.
Style 1, from the base of the 4-lobed ovary.	
Capsule separating into 4 1-seeded nuts	54. Borage.
Style 1, stigma simple or capitate.	
Berry or capsule, 2-celled, many-seeded	55. Nightshade.
Stamens 10.	
Styles 5.	
Fruit 5 follicles, many-seeded	34. Stonecrop.

	FAMILY.
Flowers male or female. (See No. 75.)	
Flowers in a spathe. Spadix with male fl. above female.	
Stamen 1, anther sessile. Stigma sessile.	
Berry 2- to 4-seeded	93. Arum.
Perianth 3-lobed; or a perianth-like involucre, cup-shaped, 4- or 5-lobed.	
Stamens 7 to 36. Styles 2 or 3.	
Capsule 2- or 3-celled, cells 1-seeded	72. Spurge.
Perianth 3-lobed.	
Stamens 3. Styles 3.	
Capsule 1-celled, 1-seeded	64. Amaranth.
Perianth 5-lobed in male, 2-lobed in female flowers.	
Stamens 5. Styles 2.	
Fruit 1-celled, 1-seeded	65. Goosefoot.
Perianth 5-lobed.	
Stamens 5, sinuous, in 3 bundles. Style 3-fid, stigmas 2-lobed.	
Berry 3- to 6-seeded	31. Gourd.
Perianth 6-lobed.	
Stamens 6. Styles or stigmas 3, reflexed.	
Berry imperfectly 3-celled, cells 2-seeded	81. Yam.
Ovary superior.	
Stamens 4.	
Perianth 4-lobed, scarious. Style 1.	
Capsule 1- to 4-celled, cells 1-seeded; or 2-celled, cells 4- to 8-seeded	63. Plantain.
Stamens 4 or 10.	
Perianth 4- or 5-lobed. Styles 3 or 4.	
Capsule 1-celled, many- (or few-) seeded	14. Pink.
Stamens 5.	
Perianth bell-shaped 5-lobed. Style 1.	
Capsule 1-celled, about 10-seeded	61. Primrose.
Perianth 5-lobed. Styles 2 or 3.	
Fruit 1-celled, 1-seeded, dry or fleshy	65. Goosefoot.
Stamens 6.	
Perianth with 6 broad and 6 narrow lobes. Style short.	
Capsule 2-celled, cells many-seeded	27. Loosestrife.
Stamens 8.	
Perianth 8-lobed, 4 narrower than the others. Styles 4.	
Berry 4-celled, cells 6- to 8-seeded	80. Herb-Paris.
Stamens many.	
Fruits many 1-seeded, or 3 to 10 many-seeded	1. Buttercup.
Ovary inferior.	
Style 1; stigma radiate.	
Stamens 6 or 12.	
Capsule 6-celled, cells many-seeded	70. Birthwort.
Style 1.	
Stamens 4.	
Capsule 4-celled, cells many-seeded	29. Willow-herb.
Stamens 5.	
Fruit 1-celled, 1-seeded	69. Sandalwood.
Styles 2.	
Stamens 5.	
Fruit 2-celled, cells 1-seeded	37. Umbellate.
Stamens 8.	
Cap. 1-celled, many-seeded; placentas 2, parietal.	
Stam. 10 perfect, or 5 with anthers and 5 without.	
Fruit 1-celled, 1-seeded	36. Saxifrage.
	33. Paronychia.

FLOWERING PLANTS. (CONT'D)

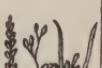

CLASS II. ENDOGENS.

DIV. VI. { Leaves net-veined. Flowers with corolla-like or calyx-like perianth, or naked.

Leaves 4 in a whorl, ovate. Flowers solitary. Stamens 8. Berry 4-celled, cells several-seeded	FAMILY.
Leaves alternate, cordate, plant twining. Flowers in a raceme. Dioecious. Stamens 6.		80. Herb-Paris.
Berry imperfectly 3-celled, cells 2-seeded	81. Yam.
Leaves radical, sagittate. Flowers in a spathe. Spadix with male fl. above female.		
Berry 1-celled, 2- to 4-seeded	93. Arum.

DIV. VII. { Leaves parallel-veined. Flowers with calyx and corolla, or corolla-like perianth.

	FAMILY.
Flowers with calyx and corolla, polypetalous. Dioecious. Stamens 9 to 20. Water plants	82. Frog-bit.
Flowers with corolla-like perianth, irregular. Stamens 1 or 2, on the style. Capsule 1-celled, many-seeded; placentas 3, parietal	83. Orchis.
Flowers with corolla-like perianth, regular. Stamens 3, anthers facing outwards. Capsule 3-celled, cells many-seeded	84. Iris.
Stamens 6, anthers facing inwards. Capsule 3-celled, cells many-seeded	85. Daffodil.
Fruit superior.	
Flowers with calyx and corolla, polypetalous. Hermaphrodite: Stamens 6 or 9. Monoecious: Stamens 20 to 30.	
Ovaries 3 to 6, 1- or 2-seeded; or many 1-seeded Flowers with corolla-like perianth. (See No. 86.)	86. Water-Plat- tain.
Stamens 6. Style 1; stigmas 1 or 3. (See Order 89, Genus 1.)	
Rhizome creeping. Berry with 1 or 2 1-seeded cells, or 3 2-seeded cells	
Bulbous (or rarely root of fleshy fibres). Capsule 3-celled, cells many-seeded	87. Asparagu-
Stamens 6. Styles 3, very long or short. Capsule 3-celled, separating into 3 many-seeded carpels	88. Lily.
	89. Meadow- fron.

Div. VIII. { Leaves parallel-veined. Flowers with calyx-like perianth, or naked.

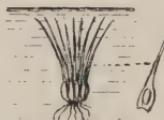

Perianth 6-lobed.	FAMILY.
Stamens 6 or 3. Hermaphrodite.	
Style 1; stigmas 3.	90. Rush.
Capsule 3- or 1-celled, many- or 3-seeded.	
Flowers in panicles, heads, or umbels	
Stamens 6. Hermaphrodite.	
Style 0; stigma sessile.	93. Arum.
Berry 3-celled, cells many-seeded.	
Flowers in a dense spike, spathe long	
Style 0; stigmas 3 or 6, sessile.	
Cap. separating into 3 or 6 1- or 2-seeded carpels.	86. Water-Plan-
Flowers in spikes or racemes	tain.
Perianth 4-lobed, or none.	
Stamens 4. Monoeious.	91. Pipewort.
Style short; stigmas 2, long.	
Capsule 2-lobed, 2-celled, cells 1-seeded.	
Flowers in heads	
Stamens 4 sessile, or 2 with filaments; hermaphrodite.	
Stamen 1; monoeious.	95. Pondweed.
Style 0; stigmas sessile.	
Fruit 4 drupes or 4 nuts, each 1-seeded.	
Flowers in spikes, clusters, or axillary	
Perianth 3-lobed, or none.	
Stamens 3, on one filament, or separate. Monoeious.	
Style simple.	92. Bulrush.
Fruit 1-celled, 1-seeded.	
Flowers in spikes or globular heads	
Perianth none.	
Stamen 1, with or without a filament. Monoeious or dioecious.	
Style 1; stigmas 2 or 3 (rarely 4).	96. Naiad.
Fruit 1-celled, 1-seeded.	
Flowers on a leaf-like peduncle, enclosed in a	
leaf-like sheath; or axillary	
Stamens 2 or 1, with or without filaments. Monoeious.	
Style simple.	94. Duckweed.
Fruit 1-celled, 1- to 6-seeded.	
Floating or submerged plants, with leaf-like	
fronds	

DIV. IX. { Leaves parallel-veined. Flowers in imbricated bracts.

Each flower in the axil of 1 bract. Stamens 3; anthers erect, entire at the apex. Style 1; stigmas 2 or 3. Embryo within the albumen. Stem solid, triangular, or round. Sheath of leaf entire	FAMILY.
Each flower enclosed in 2 bracts. Stamens 3, rarely 2; anthers versatile, notched at both ends. Styles 2, feathery. Embryo outside the albumen. Stem hollow, round, knotted. Sheath of leaf split	97. Sedge.
	98. Grass.

FLOWERING PLANTS.

CLASS I. EXOGENS.

1. BUTTERCUP FAMILY. { Corolla regular or irregular, polypetalous, inferior.
Sepals 3 to 20. Petals 5 to 30. Stamens many. Fruits
(achenes) many, 1-seeded; or 1 to 20 follicles, many-
seeded.

Fruit a berry, many-seeded.	
Sepals 4. Petals 4, small, white. Flowers in racemes	1. { Bane-berry, Herb Christopher.
Fruits (achenes) many, 1-seeded, short.	
Flowers with sepals only, petal-like.	
Sepals 4 or 5, white. Style bearded. Stem climbing, leaves opposite, pinnate	2. Traveller's Joy.
Sepals 4 to 5, yellow or purple. Fruit beardless..	3. Meadow-rue.
Sepals 5 to 20, white or purple. Flower stem with an involucre of 3 lobed or pinnate leaves	4. Anemone.
Flowers with both sepals and petals.	
Petals 5, linear, with tubular claws, yellow-green.	5. Mousetail.
Stamens 5. Fruits on a long spike	6. Pheasant's-eye.
Petals 5 to 8, crimson. Leaves finely divided ..	
Petals 5, or 8 to 10, with a pore at the base, yellow or white	7. { Buttercup, Crowfoot.
Fruits (follicles) 1 or more, many-seeded, long.	
Flowers crimson.	8. Paeony.
Sepals 5, green. Petals 5 to 10	9. Marsh Marigold.
Flowers yellow (both sepals and petals).	10. Winter Aconite.
Sepals 5 (petal-like), yellow. Petals none	11. Globe-flower.
Sepals 5 to 8 (petal-like), yellow. Petals small, linear, with a long claw	
Sepals 10 to 15 (petal-like), yellow. Petals 10 to 15, small, linear, clawed	12. { Hellebore, Bear's-foot.
Flowers green (both sepals and petals).	
Sepals 5 (petal-like). Petals 8 to 10, tubular, 2-lipped, clawed	13. Larkspur.
Flowers blue (both sepals and petals).	
Flowers irregular; upper sepal with a spur. Fruit 1 follicle	14. Columbine.
Flowers purple (both sepals and petals).	
Flowers regular; petals 5, horn-shaped.	15. { Monk's-hood, Wolfsbane.
Fruits 5 follicles	
Flowers irregular; upper sepal of a hood-form.	
Fruits 3 follicles	

2. BERBERIDACEÆ.				
				1. BERBERIS.

3. NYMPHÆACEÆ				
4) Green outside		1. NYMPHÆA.		
5) Yellow		2. NÚPHAR.		

4. PAPAVERACEÆ.				
			1. PAPÁVER.	
			2. MECONOPÉSIS.	
			3. RÖMÉRIA.	
			4. CHELIDÓNÍUM.	
			5. GLAÚCİUM.	

5. FUMARIACEÆ.				
	Fl. purple			1. FUMÁRIA.
	Fl. white or yellow			2. CORYDÁLIS.

2. BARBERRY FAMILY.

Corolla regular, polypetalous, inferior. Sepals 6 or 4. Petals 6 or 4. Stamens 6 or 4, opposite the petals; anthers opening by valves attached to top. Fruit a 2- or 3-seed berry or pod. Shrubs or herbs.

Shrubs, with 3-forked spines and ovate leaves.

Stamens 6. Fruit a 2- or 3-seeded berry, red

Herbs, with compound leaves, leaflets ovate-cordate.

Stamens 4. Fruit a many-seeded capsule

1. Barberry.

2. Barrenwort.

3. WATER-LILY FAMILY.

Corolla regular, polypetalous, inferior. Sepals 4 or 5. Petals many, passing into stamens. Stamens many. Berry many-celled, many-seeded. Leaves floating, falsely peltate.

Sepals 4 green outside. Petals many, white

1. White Water-lily.

Sepals 5 yellow. Petals many, yellow

2. Yellow Water-lily,
Brandy-bottle.

4. POPPY FAMILY.

Corolla regular, polypetalous, inferior. Sepals 2. Petals 4. Stamens many. Capsule 1- or 2-celled; placentas 2 to 20, many-seeded.

Capsule 1-celled; placentas 4 to 20 (forming imperfect cells).

Capsule globular or oblong. Petals red or white ..

1. Poppy.

Capsule obovate. Petals yellow

2. Welsh Poppy.

Capsule 1-celled; placentas 2.

Capsule linear, bristle-pointed. Petals violet ..

3. Rœmeria.

Capsule linear, smooth-pointed. Petals yellow ..

4. Celandine.

Capsule 2-celled; placentas 2.

Capsule very long, curved. Petals yellow or red ..

5. Horned Poppy.

5. FUMITORY FAMILY.

Corolla regular, polypetalous, inferior. Sepals 2. Petals 4. Stamens 6, diadelphous; anthers, four 1-celled and two 2-celled. Fruit a 1-seeded nut or a several-seeded pod.

Corolla ringent, gibbous or spurred.

Flowers purple.

Fruit a nut, 1-seeded

1. Fumitory.

Flowers white or yellow.

Fruit a pod, 2-valved, many-seeded

2. Corydal.

6. CRUCIFERÆ.

6. CRUCIFER FAMILY.

Corolla regular, polypetalous, inferior. Sepals 4. Petals 4. Stamens 6, tetrady namous (4 longer than the 2 others). Fruit 2- (rarely 1-) celled; placentas parietal. Pod short or long.

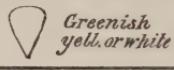

Pod short, length from 1 to 3 breadths.	
Pod without vertical division, fertile cells 1-seeded.	
Pod globose, with 1 fertile and 1 barren cell, 2-jointed. Petals white	1. Sea-kale.
Pod compressed, pendulous, with fertile cell only. Petals yellow	2. Woad.
Pod angular, with one or both cells fertile. Petals purple	3. Sea Rocket.
Pod 2-celled, globose (with vertical division); cells many-seeded.	
Petals white.	
Valves (of the pod) without veins	4. Horse-radish.
Valves with 1 vein	5. Scurvy-grass. [sure.]
Petals yellow.	
Leaves mostly lanceolate-sagittate	6. Gold of Plea-
Leaves mostly lyrate or pinnatifid, toothed ..	24. Watercress.
Pod 2-celled, dorsally compressed (viz. division in its broadest diameter); cells 1- or 2-seeded.	
Stem leafy (leaves ovate-lanceolate).	
Pods orbicular	7. Alyssum.
Pod 2-celled, dorsally compressed; cells many-seeded.	
Stem naked, leaves radical tufted.	
Pod oblong or ovate	8. Whitlow-
Pod 2-celled, laterally compressed (viz. division in its narrowest diameter); cells 1-seeded.	grass.
Petals 4, 2 larger than the 2 others.	
Pod ovate or orbicular, notched and winged ..	9. Candy-tuft.
Petals 4, all equal.	
Pod broader than long, wrinkled	10. Wart-cress.
Pod orbicular or oblong, notched or entire, keeled or winged	11. Pepperwort, Cress.
Pod 2-celled, laterally compressed; cells 2-seeded.	
Petals 4, 2 larger than the 2 others.	
Stamens with a scale at the base of each. Pod orbicular notched	12. Teesdalia.
Petals 4, all equal.	
Stamens without scales.	
Pod oval	13. Hutchinsia.
Pod 2-celled, laterally compressed; cells many-seeded.	
Leaves awl-shaped, all radical.	
Pod oval-oblong	14. Awl-wort.
Root leaves mostly pinnatifid.	
Pod triangular-cordate	15. Shepherd's Purse.
Root leaves obovate or oval.	
Pod orbicular, notched, and winged	16. Penny Cress.

N.B.—The position of radicle with respect to cotyledons is symbolized as follows:—Incumbent O!. Accumbent, O=. Con-duplicate, O>>.

Pod long, from 4 to many times its breadth. Petals lilac or purple. (See Nos. 20 and 22.) Seeds in a single row. Root leaves pinnate; leaflets few; bulbs in axils. Stigma a disk. Pod compressed; valves veinless. Root leaves lanceolate entire, or oblong sinuate. Stigma with 2 gibbous lobes. Pod orbicular or compressed	17. Coralwort.
Root leaves ovate-lanceolate, toothed. Stigma with 2 ovate lobes. Pod terete; valves with 3 faint veins	18. Stock.
Petals white. (See Nos. 24 and 27.) Seeds in a single row. Root leaves pinnate (leaflets various). Pod compressed; valves flat veinless	19. Dame's Violet.
Root leaves reniform or cordate, crenate. Pod terete; valves with 1 rib and 2 veins ..	20. Bitter-cress.
Root leaves obovate, elliptic, or pinnatifid. Pod compressed; valves with 1 rib or many veins. (In A. Thaliana the cotyledons are incumbent.)	21. {Sauce-alone, Hedge-garlic.
Petals yellow. Seeds in a double row. Stem leaves oblong, arrow-shaped, entire. Calyx erect. Pod compressed; valves with 1 rib	22. Rock-cress.
Root leaves lobed, pinnatifid, lyrate, or pinnate. Calyx spreading. Pod compressed; valves with 1 vein	22. Tower-mus- tard.
Pod terete; valves veinless	23. Rocket.
Seeds in a single row. Root leaves lanceolate, acute, entire. Lobes of stigma spreading. Pod compressed or 2-edged; valves with 1 rib	24. Watercress.
Root leaves lanceolate, slightly toothed; or obo- vate, entire. Stigma simple. Pod 4-edged; valves with 1 rib	25. Wallflower.
Root leaves lobed, pinnatifid, lyrate, or pinnate. Pod moniliform, divided into 1-seeded cells. Petals yellow, white, or lilac	26. {Worm-seed, Treacle-mus- tard.
Pod with a short or long conical beak. Calyx spreading. Valves with 3 to 5 veins	27. Radish.
Calyx erect. Valves with 1 vein	28. Mustard.
Pod with a simple pointed or capitate style. Pod terete; valves with 1 rib	29. Cabbage.
Pod terete; valves with 3 veins	30. Wintercress.
	31. Hedge-mus- tard.

7. MIGNONETTE FAMILY.

Corolla irregular, polypetalous, inferior. Sepals 4 to 6. Petals 4 to 6. Stamens 10 to 20, on a one-sided disk. Capsule 1-celled, with 3 (rarely 4 to 6) parietal placentas, many-seeded, open at the top.

Flowers in spikes or racemes.

Petals greenish-yellow or white. Leaves entire, pinnatifid, or pinnate

1. Mignonette.

8. ROCK-ROSE FAMILY.

Corolla regular, polypetalous, inferior. Sepals 3 large, and 2 or 0 small. Petals 5. Stamens many. Style simple. Capsule imperfectly 3-celled, seeds several. Herbs or shrubs.

Flowers in racemes. Petals yellow or white.

Leaves opposite, linear-oblong or ovate

1. Rock-rose.

9. VIOLET FAMILY.

Corolla irregular, polypetalous, inferior. Sepals 5, saccate at the base. Petals 5. Stamens 5, cohering, 2 spurred. Style with a hooded stigma. Capsule 1-celled, with 3 parietal placentas, seeds many. Leaves with stipules.

Flowers spurred (solitary). Petals blue, pink, yellow, or white.

Leaves cordate or ovate with pinnatifid stipules ..

**1. {Violet, Pansy,
Heartsease.**

10. SUNDEW FAMILY.

Corolla regular, polypetalous, inferior. Sepals 5. Petals 5. Stamens 5. Styles 3, deeply bifid. Capsule 1-celled, with 3 parietal placentas in the middle of valves; seeds many. Leaves circinate in bud.

Flowers in racemes. Petals white.

Leaves all radical, orbicular or obovate-lanceolate, covered with glandular hairs

1. Sundew.

11. SEA-HEATH FAMILY.

Corolla regular, polypetalous, inferior. Calyx tubular, with 5 teeth. Petals 5. Stamens 6. Style 3-fid. Capsule 1-celled, with 3 parietal placentas, seeds many.

Flowers terminal, or from the forks of the stem, sessile.

Petals pink.

Leaves oblong (with reflexed edges), clustered

1. Sea-heath.

12. MILKWORT FAMILY.

Corolla irregular, polypetalous, inferior. Sepals 2 large (coloured) and 3 small. Petals 3. Stamens 8, in two clusters. Style 1, curved. Capsule 2-celled (compressed), cells 1-seeded.

Flowers with the 2 inner sepals large and petal-like;

in racemes. Petals blue, pink, or white.

Leaves obovate or oblong-lanceolate

1. Milkwort.

13. WATERWORT FAMILY.

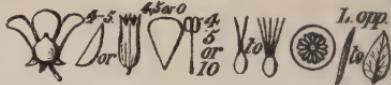

Corolla regular, polypetalous, inferior. Sepals 3 or 4. Petals 3 or 4. Stamens 6 or 8. Styles 3 or 4. Capsule 3- or 4-celled, cells many-seeded.

Flowers solitary, stalked, or sessile. Petals red.

Leaves opposite, obovate. Stem rooting, water plants.

<i>Calyx</i>				14. DO.
				15. SPERGULA.
				16. CERASTIUM.

14. PINK FAMILY.

{ Corolla regular, polypetalous, inferior. Sepals 4 or 5, distinct, or united into a tubular calyx. Petals 4, 5, or 0. Stamens 4, 5, or 10. Styles 2 to 5. Capsule 1-celled, many-seeded; placentae central. Leaves opposite, entire, varying from linear to ovate.

Sepals united, forming a tubular calyx.

Styles 2.

Calyx with 2 or more scales at the base.

Capsule with 4 valves

1. *Pink and Carnation.*

Calyx without scales at the base.

Capsule with 4 valves

2. *Soapwort.*

Styles 3.

Capsule more or less 3-celled, with 6 valves

3. *Catchfly.*

Styles 5.

Capsule 1- or partly 5-celled, with 5 or 10 valves

4. *Campion.*

Sepals 4 or 5, distinct.

Styles 3.

Petals none.

Capsule with 3 valves

5. *Cyphel.*

Petals 5, bifid.

Capsule with 6 valves

6. *Stitchwort.*

Petals 5, jagged or toothed.

Flowers 3 to 8, umbellate

7. *Holosteum.*

Petals 5, emarginate.

Leaves obovate, upper ones 4 in a whorl, stipulate

8. *Polycarp.*

Petals 5, entire.

Leaves linear, stipulate. Petals purple

9. *Sand Spurry.*

Capsule 3- to 5-seeded, valves 3

10. *Sea Purslane.*

Capsule many-seeded, valves 3

11. *Sandwort.*

Capsule many-seeded, valves 6

12. *Do.*

Styles 4.

Petals 4, entire. Capsule with 8 valves

13. *Moenchia.*

Petals 4, entire, or none. Capsule with 4 valves

14. *Pearl-wort.*

Styles 5.

Petals 5, entire.

Leaves opposite, without stipules

14. *Do.*

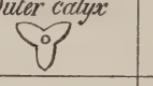

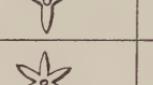

Leaves whorled, with stipules

15. *Spurry.*

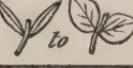

Petals 5, bifid.

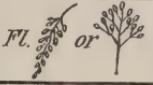

Capsule with 10 valves

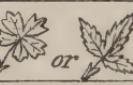

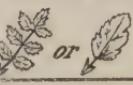

16. *Mouse-ear.*

15. MALVACEÆ.

						1. ACER.	

19. GERANIACEÆ.							
						1. GERÁNIUM.	
						1. ERODIUM.	

15. MALLOW FAMILY.

Corolla regular, polypetalous, inferior. Inner sepals 5, valvate in the bud. Outer sepals 3 or 6. Petals 5. Stamens many, united at the base. Styles many, united at the base. Fruit 8- to 20-celled, cells 1-seeded.

Leaves alternate, stipulate, lower variously lobed. Inner calyx of 5 sepals.

Shrubs.

Outer calyx of 3 ovate sepals 1. Tree Mallow.

Herbs.

Outer calyx of 3 lanceolate sepals 2. Mallow.

Outer calyx of 6 lanceolate sepals 3. Marsh-mallow.

16. LIME FAMILY.

Corolla regular, polypetalous, inferior. Sepals 5, valvate in the bud. Petals 5. Stamens many. Style simple. Ovary 5-celled, cells 2-seeded. Fruit 1-celled, 1- or 2-seeded. Trees.

Flowers on a bract. Petals straw colour.

Leaves alternate, obliquely cordate, stipulate 1. Lime or Linden.

17. ST. JOHN'S WORT FAMILY.

Corolla regular, polypetalous, inferior. Sepals 5. Petals 5. Stamens in 3 (rarely 5) bundles. Styles 3 or 5. Capsule with 3- or 5-cells, cells many-seeded. (Herbs or shrubs.)

Sepals mostly with glandular dots.

Petals yellow. Leaves opposite, entire, linear to ovate

1. St. John's Wort.

18. MAPLE FAMILY.

Corolla regular, polypetalous, inferior. Calyx-lobes 5. Petals 5. Stamens usually 8 (on an hypogynous disk). Styles 2. Ovary 2-celled, cells 1- or 2-seeded. Fruit winged. Trees.

Flowers in pendulous racemes, or erect corymbs.

Petals greenish. Leaves opposite, lobed

1. Maple.

19. GERANIUM FAMILY.

Corolla regular, polypetalous, inferior. Sepals 5. Petals 5. Stamens 5 or 10, united at the base. Fruit 5-celled, cells 1-seeded. Fruit with a long beak. Leaves opposite, stipulate. (Stem swollen at the nodes.)

Stamens 10.

Awns of carpels not bearded internally; ultimately recurved.

1. Crane's-bill.

Leaves divided palmately, or into 3 pinnate segments

Stamens, 5 fertile, with scales at the base, and 5 sterile.

Awns of carpels bearded; ultimately spirally twisted.

Leaves pinnate; or ovate, lobed

2. Stork's-bill.

20. BALSAM FAMILY. { Corolla irregular, polypetalous, inferior. Sepals 3, yellow.
Petals 3. Stamens 5, anthers cohering. Ovary 5-celled,
cells many-seeded. Succulent plants.

Lower sepals spurred, horn-shaped. Flower yellow or orange, spotted. Leaves alternate, ovate, serrate	1. Balsam.
--	-------------------

21. WOOD-SORREL FAMILY. { Corolla regular, polypetalous, inferior. Sepals 5.
Petals 5. Stamens 5 long and 5 short. Styles 5.
Ovary 5-celled, cells few-seeded.

Flowers solitary or in scant umbels. Petals white or yellow. Leaves ternate, stipulate	1. Wood-sorrel.
---	------------------------

22. FLAX FAMILY. { Corolla regular, polypetalous, inferior. Sepals 4 or 5. Petals 4
or 5. Stamens 4 or 5. Styles 4 or 5. Capsule with 4 complete
and 4 incomplete, or with 5 complete and 5 incomplete dissepiments.

Stamens 4. Styles 4. Petals 4, white. Sepals 4	1. All-seed.
Stamens 5. Styles 5. Petals 5, blue or white. Sepals 5	2. Flax.

23. SPINDLE-TREE FAMILY. { Corolla regular, polypetalous, inferior. Sepals 4
or 5. Petals 4 or 5. Stamens 4 or 5. Styles
1 or 2. Ovary 4-celled, cells 1-seeded; or 2-
celled, cells 2-seeded. Shrubs or trees.

Stamens 4. Style 1. Petals 4, yellowish-white. Leaves ovate-lanceolate, minutely serrate	1. Spindle-tree.
Stamens 5. Styles 2. Petals 5, greenish-white. Leaves pinnate, leaflets 5 to 7. Stipules deciduous	2. Bladder-nut.

24. BUCKTHORN FAMILY. { Corolla regular, polypetalous, inferior. Calyx-lobes
4 or 5, valvate in bud. Styles 1, or 4 partly united.
Petals 4 or 5. Stamens 4 or 5 opposite the petals.
Fruit a 4- or 2-celled berry, cells 1-seeded. Shrubs
or trees.

Fruit a black or purple berry. Petals small greenish-white. Leaves obovate, entire; or oval, serrate	1. Buckthorn.
---	----------------------

25. PEAFLOWER FAMILY.

Corolla irregular (papilionaceous), polypetalous, inferior. Calyx-lobes 5. Petals 5. Stamens 10, all or 9 united. Style 1. Fruit a long or short legume.

Shrubs, or under-shrubs.

Leaves simple, awl-shaped.

Calyx of 2 sepals, with 2 bracts. Flowers yellow

Leaves simple (mostly lanceolate or obovate).

Calyx with 5 teeth, the 2 upper longer than the others. Flowers yellow

Leaves simple or ternate. (Leaves and leaflets mostly oblong or obovate.)

Calyx 2-lipped, lips short.

Stipules free from leaf-stalk. Flowers yellow ..

Calyx 5-cleft, segments narrow.

Stipules adnate to leaf-stalk. Flowers rose ..

Herbs.

Leaves ternate. (Leaflets mostly linear, lanceolate, obovate or orbicular.)

Pod variously curved, or spirally twisted.

Flowers in scant racemes or heads

Pod short, seldom longer than the calyx; seeds 1 to 4.

Flowers in heads or umbels

Pod short, sub-globose, longer than the calyx; seeds 1 to 4.

Flowers in long racemes

Pod compressed, truncate, seeds 6 to 8.

Flowers 2 or 3 together. Stipules small, not leaf-like

Pod long.

Bracts ternate. Stipules large, leaf-like

Leaves pinnate, with 2 or more pairs of leaflets, and an odd terminal one. (Leaflets mostly linear, lanceolate, oblong, oval, or obovate.) (See No. 9.)

Pod enclosed in inflated calyx, 1-seeded.

Bracts leaf-like. Flower heads 2 (or 3) together

Pod twice as long as calyx, prickly, 1-seeded.

Flowers in dense racemes, rose streaked

Pod much longer than the calyx, upper suture inflexed.

Stipules adnate to the leaf-stalk. Keel acute ..

Pod much longer than the calyx, lower suture inflexed. Stipules free from leaf-stalk. Keel blunt

Pod many-jointed, contracted at the joints.

Bracts leaf-like. Flowers rose streaked

Pod many-jointed, not contracted at joints.

Bracts none. Flowers 2 to 5 together, yellow ..

Pod many-jointed, joints crescent-shaped.

Bracts none. Flowers 5 to 8 together, yellow ..

Leaves pinnate, with 2 or more pairs of leaflets, and a terminal stump. (Leaflets mostly lanceolate or oblong.)

Style flattened, hairy on the inner side only.

Flowers in racemes

Leaves pinnate, with 2 or more pairs of leaflets, and a tendril. (Leaflets mostly linear, lanceolate, or ovate.)

Style filiform, hairy on the outside or all round.

Stem angular, and stipules mostly half-sagittate or ovate (not leaf-like)

Style flattened, hairy on the inner side only. Stem winged, or stipules broad, leaf-like, hastate ..

Leaves pinnate, with a single pair of leaflets and a tendril (leaflets mostly linear, lanceolate, or obovate); or a single lanceolate leaf-like bract; or a hastate bract, with a tendril.

Style flattened, hairy on the inner side only

26. ROSE FAMILY.

Corolla regular, polypetalous, inferior or superior. Calyx-lobes 4 to 10. Petals 5, 4, or 8. Stamens many, perigynous (inserted at the base of the sepals). Ovaries many, or 1 to 5. Fruit various. Leaves stipulate.

Trees or shrubs.

Fruit many hairy nuts in a fleshy calyx-tube.

Petals large, notched. Leaves pinnate, stipules adnate to petiole; leaflets 5 to 9; stem prickly

Fruit granulated, consisting of many small drupes.

Petals entire. Leaves ternate or quinate, or rarely simply lobed; stem prickly

Fruit a fleshy drupe.

A cherry or plum. Leaves toothed, varying from lanceolate to obovate

Fruit a thick fleshy calyx-tube, a pome with 1 to 5 cells, cells 1- to 2-seeded.

Flowers solitary. Calyx segments long, leaf-like.

Leaves lanceolate. Carpels bony

Flowers 1 to 4 together. Calyx with short lobes.

Leaves roundish ovate. Carpels bony

Flowers in compound cymes.

Leaves deeply lobed (stem thorny). Carpels} bony

Leaves variously toothed, lobed, or pinnate. Carpels horny

Herbs.

Petals none.

Hermaphrodite. Stamens 1 to 4.

Calyx of 8 segments in 2 rows, green; alternate segments smaller

Calyx of 4 segments in 1 row, purple

Polygamous. Stamens 20 to 30.

Male flowers with long delicate stamens.

Female flowers with a tufted style

Calyx of 5 segments in 1 row.

Flowers in compound cymes.

Fruit 5 to 12 follicles

Flowers in long spikes.

Fruit 1 to 2 nuts in a turbinete calyx armed with hooked bristles

Calyx of 8 segments in 1 row.

Petals 8, white.

Fruit many small nuts with hairy styles.

Receptacle flat, dry

Calyx of 10 or 8 segments in 2 rows, the outer segments usually smaller.

Petals 5, white.

Fruit many small nuts, on a large succulent deciduous receptacle

Fruit many small nuts, on a large flattish dry receptacle

Petals 5 or 4, yellow.

Stamens many. Fruit many small nuts, on a flattish dry receptacle

Stamens many. Fruit many small nuts, with jointed hooked styles, on an elongated dry receptacle

Stamens 5. Fruit many small nuts, on a flattish dry receptacle

Petals 5, purple.

Fruit many small nuts, on an ultimately large spongy receptacle

Petals 4, yellow. Capsule linear, short, 4-celled, cells many-seeded, seeds glabrous

3. **{ Evening Primrose.**

Petals 4, pink, red, or white. Capsule linear, long, 4-celled, cells many-seeded. Seeds hairy .. .

4. **Willow-herb.**

30. MARE'S-TAIL FAMILY.

Corolla regular, polypetalous, superior; or none. Calyx-lobes 2 or 4. Petals 4, or (usually) none. Stamens 1, or in male flowers 8. Style 1, or in female flowers 4. Fruit 1-celled, 1-seeded; or separating into 4 1-seeded nuts. Water plants.

Hermaphrodite. Stamen 1. Style 1 acute.

Fruit a 1-celled nut. Leaves linear, 6 to 12 in a whorl

1. **Mare's-tail.**

Monococious. Stamens 8. Styles 4 villous.

Fruit separating into 4 1-seeded nuts. Leaves pinnate, 3 to 5 in a whorl

2. **Water Milfoil.**

31. GOURD FAMILY.

Corolla regular, monopetalous, superior. Dioecious. Calyx-lobes 5. Corolla-lobes 5. Stamens 5, sinuous, in 3 bundles. Style 3-fid, stigmas 2-lobed. Fruit a 3- to 6-seeded berry.

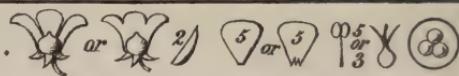

Stamens 5, sinuous, in 3 bundles.

Corolla veined, greenish-white. Fruit red or black.

Stem climbing, with tendrils, leaves lobed .. .

Corolla regular, polypetalous, superior. Calyx with 5 or 0 teeth. Petals 5. Stamens 5. Styles 2. Ovary 2-celled, cells 1-seeded. Flowers in umbels.

1^{STLY} FRUIT BRISTLY, HAIRY, OR SCALY.

Lower leaves palmate.

General involucle bracts 3-lobed. Petals erect, obovate, point long, inflexed, white. Fruit sub-globose, with hooked spines, nearly circular in transverse section. Ridges obscure; stripes (or vittæ) solitary

Lower leaves roundish or plaited.

Flowers in heads. Petals erect, oblong, point long, inflexed, blue. Fruit covered with chaffy scales and crowned with calyx teeth, nearly circular in transverse section. Carpels with obscure ridges and slender solitary stripes

Lower leaves simply pinnate.

Umbels of 6 to 10 rays. Petals orbiculate, point inflexed, pink. Fruit hairy, much dorsally compressed, margin thickened.

Carpels with slender ridges. Stripes 1 to 3

Umbels of 2 to 5 rays. Petals orbiculate, point inflexed, rose.

Fruit prickly, slightly laterally compressed.

Carpels deeply furrowed on the inner side. Stripes solitary

Lower leaves 2- or 3-pinnate.

General involucle none. (See No. 4.)

Umbels of 3 or 4 rays.

Stem not swollen below the nodes. Fruit prickly, slightly laterally compressed, beak inconspicuous. Carpels deeply furrowed on the inner side; stripes solitary

Umbels of 4 to 8 rays.

Stem swollen below the nodes. Fruit with hooked prickles, laterally compressed, beak smooth upright. Carpels deeply furrowed on the inner side; without stripes

General involucle present.

Umbels of 1 to 10 rays.

General involucle bracts entire. Fruit very prickly, laterally compressed. Carpels furrowed; ridges and spaces prickly; stripes solitary

Umbels of 10 to 20 rays.

General involucle bracts pinnatifid. Fruit prickly, dorsally compressed; stripes solitary

Umbels of 10 to 30 rays.

Fruit with delicate hairs, slightly dorsally compressed. Carpels furrowed; stripes solitary

1. Sanicle.

2. Eryngio.

36. Hartwort.

3. Hen's-foot.

3. Do.

23. Chervil.

4. Hedge-parsley.

5. Carrot.

6. Seseli.

2^{NDLY} FRUIT GLABROUS, MORE OR LESS LATERALLY COMPRESSED.

Leaves peltate.

Flowers in one head; or two heads one above the other. Stem creeping. Petals ovate, entire, pinkish. Fruit laterally flattened; ridges filiform; stripes (or vittæ) none

Lower leaves simple and entire; ovate, elliptic, or linear-lanceolate. Stem leaves perfoliate, lanceolate or linear, with parallel veins.

Petals entire, with an involute broad point; yellow. Carpels with prominent ridges; stripes none or solitary, or in threes

Lower leaves palmately cleft.

Partial involucle of 15 to 20 bracts. Flowers polygamous. Fruit ridges toothed. Stripes none

Leaves ternately compound.

Umbels of 8 to 12 rays. Petals elliptic, entire, yellowish-green. Leaflets broadly ovate. Carpels deeply furrowed; ridges prominent; stripes many

Umbels of 12 to 20 rays. Petals obovate, notched, white. Leaflets ovate-lanceolate. Carpels solid; ridges prominent; stripes none

7. (Penny-wort,
White-rot.

8. Hare's-ear.

9. Astrantia.

10. Alexanders.

11. (Gout-weed,
Bishop's-weed.

Leaves simply pinnate. Partial involucre none. Umbels of 3 to 9 rays. Segments of upper leaves wedge-shaped. Carpels with filiform ridges; stripes solitary	12. Celery.
Umbels with 10 to 15 rays. Segments of upper leaves linear, or ovate-serrate. Carpels with filiform ridges; stripes 3 or more	13. { Pimpinel, Burnet-Saxi- frage.
Partial involucre present. Umbels of 2 to 8 unequal rays. Petals roundish, point inflexed. Stem wiry. Carpels with filiform ridges; stripes solitary	14. Parsley.
Umbels of 2 to 8 equal rays. Petals ovate, entire, with straight or inflexed points. Leaflets ovate, toothed, lobed, or in capillary segments. Carpels with prominent ridges; stripes solitary	15. Marsh-wort.
Petals broadly obovate, deeply notched, points in- flexed. Segments of upper leaves entire. Carpels with filiform ridges; stripes solitary, clavate	16. Stonewort.
Umbels of 10 to 15 rays. Petals obovate, points inflexed. Segments of upper leaves oblong or lanceolate, toothed. Carpels with filiform ridges; stripes 3 or more together	17. Water-parsnip.
Leaves 2- or 3-pinnate. Flowers diœcious. Partial involucre none. Leaflets linear or subulate. Carpels with filiform ridges, and a solitary stripe beneath them ..	18. Honewort.
Leaf-segments all linear. (See No. 22.) Petals obovate, point inflexed. Umbels of 5 to 10 rays, with or without a general involucre. Carpels with filiform ridges; stripes 1 to 3 together	19. { Caraway, Pig-nut, Earth-nut.
General involucre present. Stem spotted. Segments of leaves ovate, toothed. Fruit ridges crenate. Carpels deeply furrowed; stripes none	20. Hemlock.
Stem without spots. Segments of stem leaves linear-lanceolate. Car- pels furrowed, nearly globular; stripes solitary	21. Bladder-seed.
General involucre none (sometimes present in first umbels or young ones). Umbels of 2 or 3 rays. Partial involucre bracts, 2- or 3-lobed. Fruit beak very long. Carpels deeply furrowed; ridges blunt; stripes none	22. { Shepherd's Needle. Venus's Comb.
Umbels 15 to 20 rays. Fruit ovoid. Carpels with filiform ridges; stripes solitary	14. Parsley.
Stem spotted, hairy, swollen at the joints. Fruit oblong. Carpels deeply furrowed; ridges blunt; stripes solitary	23. Chervil.
Partial involucre bracts ciliate. Fruit oblong. Carpels furrowed; ridges only apparent at top; stripes none	23. Do.
Leaflets linear-lanceolate, acutely toothed. Fruit ovoid. Carpels with broad, flattened ridges; stripes solitary	24. { Water Hem- lock, Cowbane.
Plant aromatic. Fruit oblong. Carpels with prominent hollow ridges; stripes solitary	25. Sweet Cicely.

3^{RDLY} FRUIT GLABROUS, CIRCULAR, OR NEARLY SO, IN TRANSVERSE SECTION.

Lower leaves 2-ternate, with large leaflets. General involucre present. Flowers white. Leaflets ovate or 3-lobed. Carpels with many prominent ridges; stripes (or vittæ) many ..	26. Lovage.
Lower leaves 2- or 3-pinnate. General involucre present. Flowers yellowish. Umbels 10 to 15 rays. Leaf-segments linear, fine. Carpels with prominent ridges; stripes many ..	27. { Meu, Spignel, Bald-money.
Umbels 5 to 10 rays. Leaf-segments lanceolate. Carpels with prominent ridges; stripes many ..	28. Sulphur-wort, Pepper Saxifrage.
Flowers white. Umbels 15 to 20 rays. Leaf-segments lanceolate, fleshy. Carpels with sharply elevated ridges; stripes many ..	29. Samphire.
Umbels 3 to 15 rays. Styles long sub-erect. Carpels more or less coryk; ridges blunt; stripes solitary ..	30. { Water Dropwort.
General involucre none. Flowers white. Partial involucre of 5 to 10 bracts. Carpels more or less coryk; ridges blunt; stripes solitary Partial involucre of 3 short bracts. Carpels with secondary ridges conspicuous; commissure with 2 stripes ..	30. Do.
Partial involucre of 3 long bracts. Carpels with prominent ridges; stripes solitary Flowers yellow. Partial involucre none. Carpels with prominent blunt ridges; stripes solitary ..	31. Coriander. 32. Fool's Parsley. 33. Fennel.

4^{THLY} FRUIT GLABROUS, DORSALLY COMPRESSED, WINGED.

Lower leaves pinnate, with 3 or more large broad rough leaflets. Petals orbcordate, points inflexed, white. Upper leaves with a greatly dilated petiole. (See No. 38.) Fruit with a dilated margin. Carpels with club-shaped stripes (or vittæ) half-way down; ridges slender ..	34. { Cow-parsnip, Hog-weed.
Lower leaves simple pinnate. Petals roundish, entire, points inflexed, yellow. General involucre none. Segments of stem leaves ovate. Carpels with slender ridges ..	35. Parsnip.
Petals orbcordate, points inflexed, pink. General involucre present. Segments of stem leaves lanceolate. Carpels hairy, with a thickened margin; ridges slender; stripes 1 to 3 together ..	36. Hartwort.
Lower leaves 2- or 3-pinnate. Petals broadly lanceolate, entire, incurved, pink. Leaflets lanceolate or ovate. Fruit 2-winged on each side. Carpels with 3 thickened ridges; stripes solitary ..	37. Angelica.
Petals orbcordate, or ovate, points inflexed, yellow or white. Leaf-segments linear or lanceolate, entire; or ovate or 3-lobed, toothed. Fruit 1-winged on each side. Carpels with 3 dorsal and 2 inconspicuous lateral ridges; stripes solitary, or 1-3 together..	38. Hog's-fennel.

38. IVY FAMILY. { Corolla regular, polypetalous, superior. Petals 5, valvate in the bud. Stamens 5. Styles (5) united into one. Fruit a 3- to 5-seeded berry. Climbing shrubs.

Flowers in umbels, pale green.

Fruit a black berry. Leaves ovate, or 3- or 5-lobed

1. Ivy.

39. DOG-WOOD FAMILY. { Corolla regular, polypetalous, superior. Petals 4, valvate in the bud. Stamens 4. Style 1. Fruit a drupe, with a 2-celled nut, cells 1-seeded. Shrubs or herbs.

Flowers in cymes or umbels.

Berry black or red. Leaves opposite, ovate . . .

1. Dog-wood.

40. MISTLETOE FAMILY. { Corolla regular, polypetalous, superior. Petals 4. Stamens 4; anthers sessile, many-celled. Ovary with a sessile stigma. Fruit a 1-seeded berry. Parasitical shrubs on trees.

Dioecious. Male: Anthers adnate to petals, many-celled.

Female: Berry white, 1-seeded, crowned with calyx.

Leaves opposite, obovate-lanceolate

1. Mistletoe.

41. HONEYSUCKLE FAMILY. { Corolla regular or irregular, monopetalous, superior. Corolla-lobes 4 or 5. Stamens 4, 5, 8, or 10. Styles 1 to 5. Fruit usually succulent, 1- to 5-celled, cells 1- (rarely many-) seeded. Shrubs or herbs. Leaves opposite.

Stamens 4, 2 long and 2 short.

Flowers in pairs, drooping.

Style 1, filiform, stigma capitate. Corolla campanulate. Leaves broadly ovate

1. Linnæa.

Stamens 5.

Flowers in heads or pairs.

Style 1, filiform, stigma capitate. Corolla ringent. Leaves ovate, distinct or connate

1. Linnæa.

**2. (Honeysuckle,
Woodbine.**

Flowers in cymes.

Stigmas 3, sessile. Berry 1-seeded. Leaves ovate or 3- (sometimes 5-) lobed

**3. (Guelder-rose,
Wayfaring-tree.**

Stigmas 3, sessile. Berry 3- or 4-seeded. Leaves pinnate, leaflets 5 to 11

4. Elder.

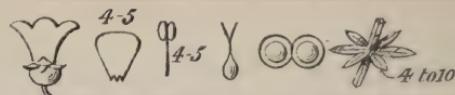

Stamens 8 or 10.

Flowers in a head, pale green.

Styles 4 or 5. Root leaves ternate 3-lobed . . .

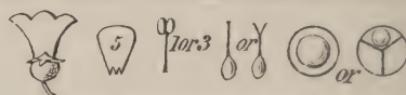

5. Moschatel.

42. RUBIACEÆ.

	 		1. RÚBIA.

45. COMPOSITE FAMILY.

Corolla regular, monopetalous, superior. Flowers consisting of many ligulate or tubular florets, collected together in heads of all ligulate florets, or all tubular, or both ligulate and tubular florets; surrounded by a common involucre. Stamens 5; anthers united into a tube. Style simple, bifid. Fruit 1-celled, 1-seeded, an achene.

1STLY FLOWER-HEADS WITH ALL THE FLORETS LIGULATE.

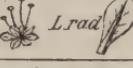

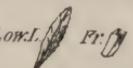

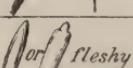

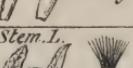

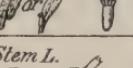

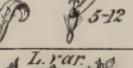

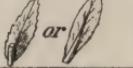

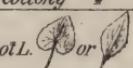

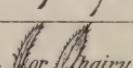

Fruit without either scales or pappus.		
Flower-heads in panicles; stem leafy. Flowers yellow.		
Involucre of 1 row of bracts, and a few short ones at base. Lower leaves lyrate		
Fruit crowned with an elevated ridge, angular.		
Flower-heads on slightly branched leafless stalks. Flowers yellow.		1. Nipplewort.
Involucre of 1 row of bracts, and a few short ones at base. Leaves radical, obovate or oblong, toothed		
Fruit crowned with 2 to 5 stiff bristles.		
Flower-heads in pairs, nearly sessile. Flowers blue.		2. <i>Swine's Succory</i> , <i>Dwarf Nipplewort</i> .
Involucre of 2 rows of bracts, the outer one half the length of the inner. Lower leaves runcinate		
Fruit with a hairy stalked pappus. (See N.B.)		3. Chicory.
Flower-heads on simple stalks.		
Involucre of 2 rows of bracts, the outer spreading or erect. Florets 30 to 60		4. Dandelion.
Flower-heads on branched stalks.		
Involucre imbricated in several series, or of 1 row of bracts and a few short ones at base. Flowers 5 to 20		5. Lettuce.
Involucre of 2 rows of bracts, the outer ones short and more or less lax. Florets 30 to 60		6. Hawk's-beard.
Fruit with a hairy sessile pappus.		
Section of fruit circular. Plant watery.		6. Do.
Involucre of 2 rows of bracts, the outer one short and more or less lax. Fruit tapered upwards ..		7. Hawkweed.
Involucre of many imbricated bracts. Fruit truncate, not beaked		8. Blue Sowthistle. 9. Sowthistle.
Section of fruit elliptic.		
Flowers blue. Fruit with a bristly pappus		10. Cat's-ear.
Flowers yellow. Fruit with a silky pappus		11. Goat's-beard.
Fruit with a feathery stalked pappus.		12. Ox-tongue.
Receptacle scaly.		
Involucre bracts imbricated in several series. Stem leafless, branched or simple		13. Thrincia.
Receptacle naked (not scaly).		
Involucre simple. Leaves grass-like, dilated at the base		14. Hawkbit.
Involucre of 2 rows of bracts, outer ones broad, leaf-like, and bristly. Leaves lanceolate, rough with hooked bristles from tubercular bases ..		15. Picris.
Fruit with a feathery sessile pappus.		
Plants with hairs, simple or forked.		
Outer row of fruits with a short scaly pappus.		
Inner rows of fruits with a feathery pappus.		
Stem simple		
Fruit smooth, all with a feathery pappus.		
Stem simple or branched, leafless		
Plants with bristles, forked or hooked.		
Fruit wrinkled in upper parts, all with a feathery pappus. Stem branched, leafy		

N.B.—As soon as the flowers are expanded, indications of the growth of a stalk to the pappus may generally be detected.

Flowers in racemes	1. Lobelia.	
Corolla regular, with 5 long lobes.		
Flowers in heads	2. Sheep's-bit.	
Stamens 5, anthers free.		
Corolla somewhat 2-lipped, with 5 long linear lobes.		
Flowers in heads, or in dense spikes	3. Rampion.	
Corolla bell-shaped, with 5 broad lobes.		
Capsule inferior	4. Bell-flower.	
Capsule half superior	5. Wahlenbergia.	
Corolla rotate, with 5 broad lobes.		
Capsule linear-oblong	6. Specularia.	

47. HEATH FAMILY.

{ Corolla regular, monopetalous or polypetalous, inferior; or monopetalous, superior. Calyx-lobes 4 or 5. Corolla-lobes 4 or 5. Stamens 8, 10, or 5; anthers opening by pores, often awned. Fruit a 4- or 5-celled berry, or a 2- to 5-celled capsule; cells many- (rarely 1-) seeded. Shrubs or herbs.

Shrubs. Corolla monopetalous.		
Ovary inferior. Stamens 8 or 10, with or without awns.		
Corolla globular, bell-shaped or rotate. Berry black or red		
Ovary superior.		
Stamens 8, with or without awns. Calyx 4-lobed.		
Calyx longer than corolla, surrounded by 4 green bracts.		
Leaves very small, closely imbricated in 4 rows .. .	1. { Bilberry,	
Calyx much shorter than the ovoid corolla.		
Leaves 4 in a whorl, or 3 in a whorl and clustered	{ Cranberry.	
Leaves clustered		
Stamens 5, awnless. Calyx 5-lobed.		
Corolla bell-shaped.		
Leaves opposite, revolute. Capsule 2- or 3-celled ..	2. Ling.	
Stamens 10, awned. Calyx 5-lobed.		
Tall shrubs.		
Berry granulated, 5-celled, cells many-seeded .. .	3. Heath.	
Low-creeping shrubs. (See No. 4.)		
Berry smooth, 5-celled, cells 1-seeded .. .	4. Menziesia.	
Leaves lanceolate, revolute. Fruit a capsule, 5-celled, cells many-seeded .. .	5. Azalea.	
Herbs. Corolla polypetalous.		
Ovary superior.		
Stamens 8 or 10, anthers opening transversely. Stigma peltate. L. none, scales. Fl. in racemes, dull yellow ..		
Stamens 10, anthers opening by pores. Stigma 5-lobed. Leaves orbicular or ovate. Flowers in racemes or solitary, white or pink	6. { Strawberry-	
	{ tree.	
	7. Bearberry.	
	8. { Wild Rose-	
	{ mary.	
	9. { Yellow Bird's-	
	{ nest.	
	10. Winter-green.	

48. HOLLY FAMILY.

{ Corolla regular, monopetalous, inferior. Calyx-lobes 4 or 5. Corolla-lobes 4 or 5. Stamens 4 or 5. (Stigmas minute 4 or 5.) Fruit fleshy, seeds stony 4 (or 5). Shrubs or trees.

Flowers in axillary clusters.		
Berry globular, scarlet. Leaves nearly entire or spinous	1. Holly.	

49. JASMINACEÆ.				
	<i>Cor.</i>	<i>Fr.</i>	<i>L.</i>	<i>4,oro</i>

49. JESSAMINE FAMILY.

Corolla regular, monopetalous, inferior. Calyx-lobes 4 or 0. Corolla-lobes 4 or 0, valvate in the bud. Stamens 2. Style 1, stigma 2-lobed. Fruit a berry, 2-celled, cells 1- or 2-seeded; or a samara, 1- or 2-celled, cells 1-seeded. Shrubs or trees.

Shrubs. Corolla 4-lobed. Fruit a berry, 1- or 2-seeded.

Leaves opposite, elliptic-lanceolate

Trees. Corolla none. Fruit a samara, 1- or 2-celled, cells 1-seeded.

Leaves pinnate, leaflets 7 to 11, serrate

1. Privet.

2. Ash.

50. PERIWINKLE FAMILY.

Corolla regular, monopetalous, inferior. Calyx-lobes 5. Corolla-lobes 5. Stamens 5, filaments bent. Stigma capitate, with a ring at the base. Fruit 2 follicles.

Corolla salver-shaped, lobes oblique, blue or purple.

Prostrate herbs with opposite leaves. Leaves lanceolate or ovate

1. Periwinkle.

51. GENTIAN FAMILY.

Corolla regular, monopetalous, inferior. Calyx-lobes 4, 5, or 8. Corolla-lobes 4, 5, or 8. Stamens 4, 5, or 8. Style 1, bifid or entire. Capsule 1- or 2-celled by inflexed margin of valves; many-seeded.

Flowers blue or purple.

Stamens 5 or 4. Corolla funnel- or salver-shaped, 5- or 4-lobed.

Leaves opposite, linear-lanceolate or ovate

1. Gentian.

Flowers pink or red. (See No. 4.)

Stamens 5. Corolla 5-lobed, hairy within.

Water plants with ternate leaves

2. Buckbean,

Stamens 5. Corolla 5-lobed, tube long.

3. Bogbean.

Leaves opposite, varying from oblong to ovate ..

3. Centaury.

Flowers yellow.

Stamens 4. Corolla 4-lobed, tube long.

4. Gentianella.

Leaves opposite, linear-lanceolate

5. Limnanth.

Stamens 5. Corolla 5-lobed, ciliated at the margin.

Leaves orbicular-cordate, floating

6. Yellow-wort.

Stamens 8. Corolla 8-lobed.

Stem leaves connate

52. JACOB'S LADDER FAMILY.

Corolla regular, monopetalous, inferior. Calyx-lobes 5. Corolla-lobes 5. Stamens 5, unequal. Style 3-fid. Capsule 3-celled, cells many-seeded.

Corolla rotate (tube very short), blue or white.

Flowers in a terminal panicle. Leaves pinnate ..

1. Jacob's Ladder.

53. CONVOLVULUS FAMILY.

Corolla regular, monopetalous, inferior. Sepals or calyx-lobes 5. Corolla-lobes 5 (plaited in the bud). Stamens 5. Style 1, bifid, or 2. Capsule 4-seeded, 1- or 2-celled. (Twining herbs.)

Style 1. Bracts 2, close to or distant from calyx.

Leaves ovate-sagittate, or sagittate with truncate lobes, or reniform

1. Convolvulus,
Bindweed.

Styles 2. Flowers in globular clusters.

Leaves none. Parasite

2. Dodder.

54. BORAGINACEÆ.

L. alt.

	 White	Fl.  Cal. 	5. DATURA.

54. BORAGE FAMILY.

Corolla regular, monopetalous, inferior. Calyx-lobes 5. Corolla-lobes 5. Stamens 5. Style 1, from the base of ovary. Ovary 4-lobed. Capsule separating into 4 1-seeded nuts. Leaves alternate.

Corolla with no scales in the tube.

Calyx tubular, toothed.

Leaves ovate-lanceolate, spotted

1. Lungwort.

Calyx deeply 5-cleft, segments ovate.

Leaves ovate-acute, fleshy, glaucous

2. Oyster Plant.

Calyx deeply 5-cleft, segments linear or lanceolate.

Corolla oblique, more or less irregular, blue ..

3. Viper's Bugloss.

Corolla regular, white, yellow, blue, or purple ..

4. Gromwell.

Corolla with scales in the tube.

Corolla tubular, with 5 small teeth. Scales lanceolate-subulate.

5. Comfrey.

Corolla rotate; anthers forming a cone in the centre.

Corolla blue

6. Borage.

Corolla funnel-shaped, with a slightly bent tube, and rather oblique.

Corolla blue

7. Bugloss.

Corolla with a straight tube and regular spreading limb

Fruit pitted. Calyx-lobes with small teeth between them

8. Madwort.

Fruit depressed, covered with hooked prickles ..

9. Hound's-tongue.

Fruit wrinkled. Flowers in spikes with bracts ..

10. Alkanet.

Fruit smooth. Flowers in racemes without bracts

11. Forget-me-not, Scorpion-grass.

55. NIGHTSHADE FAMILY.

Corolla regular, monopetalous, inferior. Calyx-lobes 5 or 2. Corolla-lobes 5. Stamens 5. Style 1; stigma simple or capitate. Fruit a 2-celled berry or capsule, many-seeded. Leaves alternate.

Fruit an oblong or roundish berry.

Corolla rotate, purple or white; anthers close together.

Flowers in drooping cymes, or in umbels

1. Nightshade.

Coral bell-shaped, purple.

Flowers solitary, axillary, on short stalks

2. Deadly Night-shade.

Corolla funnel-shaped; tube short; lobes patent; bluish.

Anthers with woolly filaments. Calyx 2-lipped ..

3. Box-thorn.

Fruit a smooth capsule, opening transversely; crowned with persistent calyx.

Corolla funnel-shaped; tube short; lobes unequal;

greenish-yellow, with purple veins

4. Henbane.

Flowers in one-sided leafy spikes. Plant viscid.

Fruit a prickly capsule, opening longitudinally; 4-valved,

cells 2, partially bipartite. Calyx deciduous.

Corolla funnel-shaped, angular, white.

Flowers solitary. Calyx tubular

5. Thorn-apple.

56. OROBANCHACEÆ.

56. BROOMRAPE FAMILY.

Corolla irregular, monopetalous, inferior. Calyx-lobes 2 or 4. Stamens 4, didynamous. Style 1, stigma 2-lobed. Fruit capsular, 1-celled, with many minute seeds, placentas 2 (or more) parietal. Leaves none. Parasites.

Calyx deeply divided into 4 or 2 (rarely 5) lobes.

Flowers in spikes. Parasite on herbs

..

1. Broomrape.

Calyx with 4 broad short lobes.

Flowers in one-sided racemes. Parasite on trees

.. **2. Toothwort.**

57. FIGWORT FAMILY.

Corolla irregular, monopetalous, inferior. Calyx-lobes 4 or 5. Stamens 4, didynamous, or 2 or 5. Style 1, bifid. Fruit a capsule, 2-celled, cells many- or 2-seeded.

Stamens 2.

Calyx 4- (rarely 5-) lobed.

Corolla rotate, unequally 4-lobed, lower lobe the smallest. Flowers pink or blue

1. Speedwell.

Stamens 5, 2 or more hairy.

Calyx 5-lobed.

Corolla rotate or concave, lobes 5, unequal. Flowers yellow or white

2. Mullein.

Stamens 4, didynamous.

Calyx with 2 to 5 irregular jagged lobes, unequal.

Corolla ringent, upper lip laterally compressed, lower 3-fid, pink or purple.

Leaves pinnatifid

3. Red Rattle,
Lousewort.

Calyx inflated after flowering, 4-toothed.

Corolla ringent, upper lip laterally compressed, lower lip 3-lobed, yellow. Capsule blunt, cells many-seeded

4. Yellow Rattle.

Calyx 4-lobed, or 4-toothed.

Corolla ringent, upper lip laterally compressed, lower lip 3-fid, yellow or purple.

Capsule obliquely acuminate, cells 1- or 2-seeded

Corolla ringent, upper lip not laterally compressed, yellow or purple.

Capsule acuminate, cells many-seeded

5. Cow-wheat.

Corolla tubular, 2-lipped, upper lip 2-lobed, lower lip 3-lobed, white or pink.

Capsule blunt, cells many-seeded

6. Bartsia.

Calyx 5-lobed, or 5-toothed.

Corolla personate, spurred.

Flowers blue, purple, or yellow

7. Eye-bright.

Corolla personate, slightly gibbous at the base.

Flowers pink, purple, or white

8. Toad-flax.

Corolla globose, dull purple or yellow.

Stem 4-angled, rarely 5-angled

9. Snapdragon.

Corolla bell-shaped, oblique, red or white.

Flowers in a terminal spike. Leaves ovate ..

10. Figwort.

Corolla ringent, upper lip folded at the sides, yellow.

Stem leaves roundish-ovate, veined, opposite ..

11. Foxglove.

Corolla bell-shaped, lobes equal, rose coloured.

Stem creeping. Leaves lanceolate-spathulate ..

12. Monkey-flower.

Corolla rotate, lobes irregular, pink.

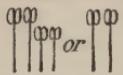

Leaves roundish-reniform, with a few broad lobes

13. Mudwort.

Leaves roundish-reniform, with a few broad lobes

58. LABIATE FAMILY.

Corolla irregular, monopetalous, inferior. Stamens 4, didynamous, or (rarely) 2. Style 1, stigma bifid. Fruit 4-lobed, separating into 4 1-seeded nuts. Leaves opposite. Stem square.

Stamens 2.	
Corolla 4-lobed, nearly regular, white.	
Calyx regular, 5-toothed. Nuts flat on the top ..	1. Gipsy-wort.
Corolla 2-lipped, lower lip 3-lobed.	2. Sage.
Calyx 2-lipped, upper lip 3-toothed, lower lip bifid.	
Bracts cordate, acuminate	3. Mint.
Stamens 4 distinct (not in pairs), not under the upper lip of the corolla. (See No. 12.)	
Corolla 4-lobed, nearly regular.	4. Germander.
Calyx regular, 5-toothed. Flowers pink or purple	
Corolla apparently with lower lip only. Upper lip very small.	5. Bugle.
Upper lip distinctly bifid. Nuts smooth.	
Flowers more or less secund	6. Thyme.
Upper lip very short, 2-lobed. Nuts rough.	7. Balm.
Flowers not secund	
Corolla 2-lipped, the lower lip 3-lobed.	8. Marjoram.
Calyx 2-lipped, the upper lip 3-toothed, the lower bifid.	
Flowers capitate, purple	9. {Cat-Mint, Ground-Ivy.
Flowers in axillary secund whorls, white	
Calyx with 5 nearly equal teeth.	
Bracts many, imbricated, purple	10. Skull-cap.
Stamens 4 in pairs, under the upper lip of the corolla, outer pair the shortest.	
Calyx with 5 nearly equal teeth.	11. Self-heal.
Calyx with 15 ribs. Flowers blue, pink, or white	
Stamens 4 in pairs, under the upper lip of corolla, outer pair the longest. (See No. 7.)	12. {Calamint, Basil.
Calyx 2-lipped, both entire, a concave scale on the upper lip. Flowers nearly sessile, opposite, in axillary pairs, secund. Nuts stalked	
Calyx 2-lipped, upper lip slightly 3-toothed, lower lip bifid. Flowers in a dense terminal spike. Filaments toothed below anther	13. Bastard Balm.
Calyx 2-lipped, upper lip 3-toothed, lower lip bifid, 13 ribs. Lower lip of corolla 3-lobed. Flowers blue, purple, or pink	14. {White Hore-hound.
Calyx membranous, ample, 3-lobed, upper lip 2- to 3-toothed. Lower lip of corolla 3-lobed. Flowers large, white or pink	
Calyx tubular, with 10 subulate hooked teeth. Stamens within the tube of the white corolla. Nuts flat at the top	15. {Black Hore-hound.
Calyx funnel-shaped, with 5 spreading, ovate, finely-pointed, teeth. Lower lip of corolla 3-lobed, middle lobe obcordate. Nuts rounded at the top	
Calyx with 5 nearly equal teeth.	
Nuts flat on the top.	
Anthers hairy.	16. Dead-nettle.
Lower lip of corolla 2-lobed, laterally toothed.	
Flowers white, pink, or purple	16. Weasel-snout.
Anthers glabrous.	17. Motherwort.
Lower lip of corolla 3-lobed, upper lip long.	
Flowers yellow	18. Woundwort.
Lower lip of corolla 3-lobed, upper lip flat, hairy. Stem leaves 3-lobed	19. Hemp-nettle.
Nuts rounded at the top.	
Anthers with longitudinal valves.	
Lower lip 3-lobed, no scales present	
Anthers with transverse valves.	
Lower lip 3-lobed, with 2 scales

Corolla-lobes 5. Stamens didynamous (2 long and 2 short). Style 1, bifid, from the top of ovary. Capsule dividing into 4 1-seeded nuts.

Flowers in a slender spike. Corolla slightly irregular, lilac.

Leaves opposite, lobed or toothed

1. Vervain.

60. BUTTERWORT FAMILY. { Corolla irregular, monopetalous, inferior. Calyx-lobes 2 or 5. Stamens 2. Style short, thick; stigma 2-lipped, lips unequal. Capsule 1-celled, many-seeded; placenta central. Marsh or aquatic plants.

Leaves radical, oblong or ovate.

Calyx 2-lipped, upper lip 3-lobed, lower 2-lobed.

Corolla ringent, spurred. Fl. solitary, blue or straw-coloured

Leaves divided into capillary segments interspersed with small bladders. Aquatic plants, floating.

Calyx 2-lipped, upper entire, lower notched. Corolla personate, spurred. Flowers in racemes, yellow ..

1. Butterwort.

2. Bladderwort.

61. PRIMROSE FAMILY. { Corolla regular, monopetalous, inferior. Calyx-lobes 4, 5, or 7. Stamens 4, 5, or 7, opposite to the corolla-lobes. Style 1; stigma capitellate. Capsule 1-celled, many- (or few-) seeded; placenta free, central.

Stamens 4.

Leaves alternate, ovate.

Corolla 4-lobed, pink. Capsule opening transversely ..

1. Bastard Pimpernel, Chaffweed.

Stamens 5.

Leaves pectinate, submerged.

Corolla-lobes salver-shaped, lilac. Flowers whorled ..

Leaves radical, cordate-ovate, angular, dentate; root-stock tuberous.

Corolla-lobes closely reflexed over the tube, white.

Flowers solitary

2. Water-violet, Featherfoil.

Leaves radical, ovate or oblong, often wrinkled.

Corolla salver-shaped, tube long, lobes notched; yellow, pink, or lilac. Flowers solitary or in umbels ..

3. Sow-bread.

Leaves alternate, obovate or roundish.

Corolla salver-shaped, with entire lobes and small scales interposed. Capsule half inferior, bract on pedicel

4. Primrose.

Leaves opposite, varying from lanceolate to ovate.

Corolla none. Calyx bell-shaped, pink, corolla-like ..

Corolla rotate, yellow. Capsule opening at the top vertically ..

5. Brook-weed.

Corolla rotate or funnel-shaped, red, pink, or blue. Capsule opening transversely ..

6. (Sea Milkwort, Black Saltwort.

Stamens 7.

Upper leaves in an irregular whorl of 5 (or 6) obovate or lanceolate leaves.

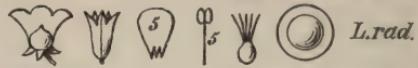

Corolla rotate, 7-lobed. Flowers 3 or 4 together ..

7. Loosestrife.

8. Pimpernel.

9. (Chickweed Winter-green.

Perianth regular, corolla-like or calyx-like, inferior. Perianth-lobes 4 to 6. Stamens 5 to 8. Styles or stigmas 2 or 3. Fruit 1-celled, 1-seeded, usually triangular. Stipules sheathing the stem.

Perianth 6-lobed, 3 inner lobes larger than the others.
Stamens 6. Styles 3, tufted. Fruit triangular.

Flowers in whorls

Perianth 4-lobed, 2 inner lobes larger than the others.
Stamens 6. Fruit compressed, winged. Stigmas 2, tufted.

Leaves reniform

Perianth 5-lobed, lobes equal.

Stamens 5 to 8. Styles 2 or 3.

Flowers in racemes or clusters

Stamens 8. Styles 3.

Flowers in cymose panicles

1. Dock.

2. Mountain Sorrel.

3. Persicaria,

3. Bistort,

3. Knot-grass.

4. Buck-wheat.

67. SWALLOW-THORN FAMILY.

Perianth regular, calyx-like, inferior. Dicotious. Perianth-lobes 2. Stamens 4. Style 1. Fruit a 1-seeded nut, enclosed in a fleshy perianth. Shrubs.

Male flowers: Perianth of 2 segments.

Female flowers: Perianth tubular, cloven at the summit.

Berry orange-coloured. Leaves linear-lanceolate, silvery

1. Sallow-thorn.

1. Sea Buckthorn.

68. DAPHNE FAMILY.

Perianth regular, corolla-like or calyx-like, inferior. Perianth-lobes 4. Stamens 8, in 2 rows. Style short, stigma capitate. Fruit a 1-seeded berry. Shrubs.

Perianth tubular, lobes 4-spreading, purple or green.

Berry red or blue-black.

Leaves lanceolate, narrowed below

1. Mezereon.

69. SANDALWOOD FAMILY.

Perianth regular, corolla-like, superior. Perianth-lobes 5. Stamens 5. Style 1. Fruit 1-celled, 1-seeded.

Perianth 5-lobed. Stamens 5, with a tuft of hairs.

Bracts 3, the middle one longest. Leaves linear .. .

1. Bastard Toad-flax.

70. BIRTHWORT FAMILY.

Perianth regular, corolla-like, superior. Perianth-lobes 1 or 3. Stamens 6 or 12. Style 1, stigma 6-rayed. Capsule 6-celled, cells many-seeded.

Perianth tubular, oblique, yellow.

Stamens 6. Leaves cordate

1. Birthwort.

Perianth bell-shaped, 3-lobed, dull green.

Stamens 12. Leaves reniform

2. Asarabacca.

71. EMPETRACEÆ.			$\delta: \text{♀}$	$\text{♂} \& \text{♀}$	♀_3			
♀_3			<i>Black</i>		<i>Evergreen</i>		1. <i>EMPÉTRUM.</i>	

72. EUPHORBIACEÆ.			$\text{♂} \& \text{♀}$		♀_{9-12}			

73. CERATOPHYLLACEÆ.			$(\text{♂} \& \text{♀})$		$8-12$			

74. CALLITRICHACEÆ.			$\text{Prth. O. } (\text{♂} \& \text{♀})$		$12-20$			

75. URTICACEÆ.			$\text{♂} \& \text{♀}$		$2-4$			

71. CROWBERRY FAMILY.

Perianth regular, like a corolla and calyx, inferior.
Dioecious. Perianth-lobes like 3 sepals and 3 petals. Stamens 3. Style 1, stigma rayed. Fruit a 9-seeded berry. Shrubs.

Stamens 3. Stigma 9-rayed.

Berry globose, black. Low evergreen shrubs

1. Crowberry.

72. SPURGE FAMILY.

Perianth or involucre regular, calyx-like, inferior. Male or female. Perianth-lobes or involucre-lobes 3 to 5. Stamens 1 to 36. Styles 2 or 3. Capsule 2- or 3-celled, cells 1-seeded; or 3-celled, cells 2-seeded.

Perianth 3-lobed.

Stamens 9 to 12. Styles 2.

Ovary 2-lobed, 2-celled, cells 1-seeded. Herbs (not milky)

1. Mercury.

Perianth-like involucre 4- or 5-lobed.

Stamens 7 to 36. Styles 3, bifid.

Ovary 3-lobed, 3-celled, cells 1-seeded. Milky herbs

2. Spurge.

Perianth of male: 3 sepals and 2 petals. Perianth of female: 4 sepals and 3 petals.

Stamens 4. Styles 3.

Ovary 3-celled, cells 2-seeded. Evergreen shrubs ..

3. Box.

73. HORNWORT FAMILY.

Perianth regular, calyx-like, inferior. Monococious. Perianth-lobes 8 to 12. Stamens 12 to 20, sessile. Style 1. Fruit 1-celled, 1-seeded. Submerged herbs.

Perianth with 8-12 entire or notched lobes.

Anthers 12 to 20, oblong. Fruit 1-seeded. Leaves whorled, forked

1. Hornwort.

74. WATER STARWORT FAMILY.

Perianth none. Monococious. Bracts 2 or 0. Stamens 1. Styles 2. Ovary 4-lobed, 4-celled, cells 1-seeded, separating in fruit. Aquatic herbs.

Stamen 1. Styles 2.

Leaves opposite, ovate or linear

1. Water Starwort.

75. NETTLE FAMILY.

Perianth regular, corolla-like or calyx-like, inferior. Male, female, or hermaphrodite. Perianth-lobes 2 or 4. Stamens 4. Stigma tufted, sessile, or on a style. Fruit 1-celled, 1-seeded.

Perianth 4-lobed.

Hairs simple. Leaves alternate, entire

1. Pellitory.

Perianth of male 4-lobed, of female 2-lobed.

Hairs glandular stinging. Leaves opposite, toothed

2. Nettle.

 76. CANNABINACEÆ. ♂	 ♀		 ♂	 ♀		<i>L. Stip.</i>
			 or	 5 lobes		1. HUMULUS.

The plate contains the following elements:

- 77. ULMACEÆ.** A large genus name at the top left.
- Fl.** An illustration of a branched inflorescence.
- Prth.** An illustration of a single flower or fruit.
- ♂** An illustration of a male flower.
- ♀** An illustration of a female flower.
- ♂ or ♀** An illustration of a flower with both male and female parts.
- ♀ or ♂** An illustration of a flower with both male and female parts.
- 1. ULMUS.** The specific genus name.
- Leaf** illustrations: one simple leaf and one palmately lobed leaf.
- Stem** and **Root** illustrations: a stem with a branch and a root system.

76. HOP FAMILY. { Male: Perianth regular, calyx-like. Female: Ovoid catkins.
Diocious. Perianth-lobes 5. Stamens 5. Styles 2. Leaves stipulate. (Twining plants.)

Male: Perianth 5-lobed, spreading. Female: Catkin ovoid, seed wrapped in scale-like perianth.
Leaves heart-shaped or 3- or 5-lobed, rough, stipulate

1. Hop.

77. ELM FAMILY. { Perianth regular, corolla-like or calyx-like, inferior. Her-maphrodite. Perianth-lobes 4 or 5. Stamens 4 or 5. Styles 2. Fruit winged, 1-seeded. Trees.

Flowers clustered. Perianth bell-shaped, 4- or 5-lobed.
Leaves unequal at the base, doubly serrate, with
deciduous stipules

1. Elm.

78. CATKIN FAMILY. { Male flowers in catkins. Female flowers in catkins, or
clustered, or solitary. Stamens 1 to 30. Styles 2 to 6.
Fruit 1-celled, 1- or several-seeded. Trees or shrubs.

Males in catkins, and females in catkins.

Flowers monœcious.

Female catkins ascending, ovate. Stamens 4. Styles 2.
Perianth 4-lobed. Leaves roundish blunt .. .

Female catkins pendulous or ascending, cylindrical.
Stamens 8 to 12. Styles 2.

Perianth none. Leaves broadly ovate or orbicular,
toothed

Flowers dioecious.

Catkins erect.

Stamens 2 (or rarely 1 or 3 to 5). Styles 2, bifid.

Perianth none. Scales entire and hairy. Seeds
hairy. Leaves various, usually narrow ..

Stamens 4 to 8. Stigmas 2.

Perianth none. Scales entire, glabrous. Leaves
lanceolate, toothed at top

Catkins pendulous.

Stamens 8 to 30. Styles 2, deeply bifid (rarely
3- to 4-lobed).

Perianth oblique. Scales jagged. Leaves ovate,
lobed, or broadly triangular

Males only in catkins.

Flowers monœcious.

Catkins cylindrical. Stamens 8. Styles 2.

Nuts in a jagged involucr.

Leaves obovate-cordate

Catkins loose. Stamens 5 to 14. Styles 2.

Nuts small, in a 3-lobed scale.

Leaves ovate-acute, doubly toothed .. .

Catkins globular. Stamens 8 to 15. Styles 3.

Nuts enclosed in a prickly involucr.

Leaves ovate, obscurely toothed .. .

Catkins slender, lax. Stamens 5 to 10. Style 3-lobed.

Nuts (acorns) in a cup-shaped involucr.

Leaves ovate-oblong, irregularly sinuate ..

Catkins long. Stamens 8 to 20. Stigmas 6.

Nuts enclosed in a prickly involucr.

Leaves oblong-lanceolate, toothed .. .

1. Alder.

2. Birch.

3. Willow.

**4. { Sweet-gale,
Bog-myrtle.**

5. Poplar.

6. Hazel.

7. Hornbeam.

8. Beech.

9. Oak.

10. Chestnut.

82. HYDROCHARIDACEÆ.			
	 ♂ 		1. ANACHARIS.
	 ♂ 		2. HYDROCHARIS.
	 ♂ 		3. STRATIOTES.

79. PINE FAMILY.

Male flowers in cones. Female flowers in cones or solitary, and berry-like in fruit. Anther-cells 2 to 6; or stamens many, clustered. Seeds winged, or 1 to 3 enclosed in a succulent involucle. Leaves subulate or linear. Trees or shrubs.

Leaves in pairs, subulate.

Anther-cells 2, adnate to the scales.

Fruit a cone. Seeds winged, in pairs

Leaves in whorls of 3, linear subulate, mucronate.

Anther-cells 4 to 7, inserted on the lower edge of scales.

Fruit like a 2- or 3-seeded berry

Leaves in 2 rows, crowded, linear acute.

Stamens 8 to 10, in a cluster at the top of catkin; scales below.

Fruit like a single-seeded berry

1. Pine, Fir.

2. Juniper.

3. Yew.

FLOWERING PLANTS. (CONT'D)**CLASS II. ENDOGENS.****80. HERB-PARIS FAMILY.**

Leaves net-veined. Perianth regular, calyx-like, inferior. Hermaphrodite. Perianth-lobes 8. Stamens 8. Styles 4. Fruit a 4-celled, many-seeded berry.

Perianth 8-lobed, 4 inner narrower than the others, yellowish-green.

Berry globose, bluish-black. Leaves usually 4 in a whorl

1. Herb-Paris.

81. YAM FAMILY.

Leaves net-veined. Perianth regular, corolla-like or calyx-like, superior. Dioecious. Perianth-lobes 6. Stamens 6. Style 1; stigmas 3. Fruit an imperfectly 3-celled berry, cells 2-seeded.

Perianth 6-lobed, yellowish-green.

Berry ovoid, scarlet.

Leaves cordate, shining. Flowers in axillary racemes

1. Black Bryony.

82. FROG-BIT FAMILY.

Corolla regular, polypetalous, superior. Dioecious. Sepals 3. Petals 3. Stamens 9 to 20. Styles 3, feathery; or 6, bifid. Floating or submerged plants.

Leaves oval-oblong, 3 in a whorl, submerged.

Stamens 9. Styles 3, feathery.

Capsule 1-celled, few-seeded; placentas 3, parietal

Leaves orbicular, floating.

Stamens 9 to 12. Styles 6, bifid.

Capsule 6-celled, cells several-seeded, seeds on the septa and immersed in mucus

Leaves sword-shaped, prickly-serrate.

Stamens 12 to 20. Styles 6, bifid.

Berry 6-celled, cells several-seeded, seeds on the septa and immersed in mucus

1. Water-Thyme.

2. Frog-bit.

3. Water-soldier.

83. ORCHIS FAMILY. {

Perianth irregular, corolla-like, superior. Perianth-lobes 6.
Stamens 1 or 2, on the style. Capsule 1-celled, with 3
parietal placentas; seeds very many, minute.

Leaves none (sheaths).

Flowers spurred.

Lip with the middle lobe above. Flowers few, pale yellow.
Rootstock many fleshy branches

Sepals lanceolate, acute.

Lip with the middle lobe below. Flowers yellow-green.
Rootstock many thick fleshy branches

Sepals broadly ovate, slightly acute.

Lip oblong, with 2 spreading lobes. Flowers brown. Root-
stock a dense mass of thick fleshy fibres

Flowers spurred.

Spur very minute.

Lip 3-lobed, middle lobe broad; lateral lobe linear, acute.
Flowers pink or purple. Rootstock 2 tubers with fibres
above

Spur from about $\frac{1}{2}$ the length to about the length of the ovary.

Lips variously 3-lobed, rarely 1-lobed, lobes crenate or middle
lobe notched. Flowers rose, purple, pink, or white. Root-
stock 2 entire or palmate tubers with fibres above

Spur longer than the ovary.

Lip 3-lobed, lobes entire, obovate. Flowers rose or purple.
Rootstock 2 palmate tubers with fibres above

Spur very short, or longer than the ovary.

Lips linear, entire, or 2- or 3-lobed.
Flowers white or green. Rootstock 2 taper or palmate tubers
with fibres above, or variously thickened fibres..

Lower lip entire (not spurred).

Ovary sessile.

Lip saccate.
Flowers pink on a straight spike. Rootstock creeping, with
a few fibres

Lip flat, channelled, fringed.

Flowers white, on a twisted spike. Rootstock 2 (or 3)
oblong tubers or cylindrical fibres..

Ovary stalked.

Lip inflated (above 1 inch long).
Stamens 2. Flowers purple and yellow.

Rootstock fibrous

Lip above.

Flowers green.
Rootstock bulbous; bulb above ground

Lip yellow, below or above.

Leaves 2 on stem.
Rootstock bulbous; bulb at base

Lower lip lobed.

Ovary sessile, twisted. (See Nos. 4, 5, & 7.)

Corolla nearly regular, green; petals 3-toothed.
Leaves 2 (or 3) on stem. Rootstock one tuber with fibres
above, and another tuber at the end of a fibre

Sepals converging, green. Lip 4-lobed, yellow.
Flowers in a leafless spike. Rootstock 2 tubers with fibres
above

Lip contracted in the middle, or lobed at the sides.
Flowers white or purple. (Petals and sepals converging.)

Rootstock fibrous

Ovary sessile, straight.

Lips variously lobed, velvety.
Lips brown, spotted with yellow or blue.

Rootstock 2 tubers with fibres above

Ovary stalked, straight (stalk twisted).

Lips 2- to 4-lobed, yellow-green.
Leaves 2 on stem.

Rootstock fibrous

Lips contracted in the middle.

Flowers green, purple, or white.
Rootstock creeping, fibres fleshy

87. ASPARAGUS FAMILY.

Perianth regular, corolla-like, inferior. Perianth-lobes 6 or 4. Stamens 6 or 4. Anthers facing inwards. Style 1, stigmas 1 or 3. Fruit a berry, with 1 or 2 1-seeded cells, or 3 2-seeded cells. Rhizome creeping.

Flowers on the leaves (really on the flattened shoots).	
Perianth of 6 spreading segments.	
Shrubby, branched. Leaves (so called) ovate, stiff, prickly	1. { Butcher's Broom.
Flowers in racemes, pedicels usually clustered.	
Perianth of 4 spreading segments.	
Stamens 4. Leaves 2, ovate-cordate	2. Smilacina.
Flowers in loose racemes, drooping.	
Perianth globose, bell-shaped, 6-toothed.	
Pure white. Leaves 2, ovate-lanceolate	3. { Lily of the Valley.
Flowers 1, 2, 3, or 4 together, drooping.	
Perianth tubular, bell-shaped, of 6 segments.	
Stem branched. Leaves setaceous, clustered ..	4. Asparagus.
Perianth tubular, 6-toothed.	
Stem simple. Leaves varying from lanceolate to ovate	5. Solomon's Seal.

88. LILY FAMILY.

Perianth regular, corolla-like, inferior. Perianth-lobes 6. Stamens 6. Anthers facing inwards. Style 1, stigmas 1 or 3. Fruit a 3-celled capsule, cells many-seeded. Root-stock bulbous.

Flowers solitary.	
Perianth spreading, white (with reddish lines).	
Leaves filiform, semi-cylindrical	1. Spiderwort.
Perianth bell-shaped, yellow.	
Leaves linear-lanceolate	2. Tulip.
Perianth bell-shaped, chequered, purple.	
Segments with a pore at the base	3. Fritillary.
Flowers in umbels or heads.	
Perianth spreading, yellow.	
Flowers 3 or 4 together, in umbels.	
Bracts green	4. { Yellow Star of Bethlehem.
Perianth rather spreading, purple, pink, or white.	
Flowers many, in umbels or heads.	
Bracts scarious	5. Garlic.
Flowers in lax or dense racemes, or in corymbs.	
Perianth globose, toothed, blue.	
Flowers in a dense raceme	6. { Grape Hyacinth.
Perianth tubular, bell-shaped, blue or purple.	
Flowers in a drooping raceme	7. { Wild Hyacinth, Blue-bell.
Perianth with reflexed segments, purple, spotted.	
Flowers few, drooping	8. Lily.
Perianth with spreading segments.	
Blue or purple	9. Squill.
White inside, green outside	10. { Star of Bethlehem.
Flowers in panicles.	
Perianth with spreading segments.	
White inside, purple outside. Filaments woolly ..	11. Simethis.

				2. <i>LEMNA.</i>

89. MEADOW-SAFFRON FAMILY. { Perianth regular, corolla-like, inferior; lobes 6. Stamens 6. Styles 3 or 1. Fruit a 3-celled capsule; or separating into 3 1-celled follicles; cells many-seeded.

Stamens 6, filaments woolly. Style 1. Perianth spreading, yellow. Rootstock creeping	1. Bog-Asphodel.
Stamens 6, filaments glabrous. Styles 3, short. Perianth small, yellowish-white. Rootstock creeping	2. { Scottish Asphodel.
Styles 3, very long. Perianth with a very long tube, purple. Corm coated	3. Meadow-saffron.

90. RUSH FAMILY. { Perianth regular, calyx-like, inferior; lobes 6. Stamens 6 or 3. Style 1, stigmas 3. Capsule 3-celled, cells many-seeded; or 1-celled, with dissegments, 3-seeded.

Leaves glabrous. Leaves in section circular or semicircular. Capsule 3-celled, cells many-seeded	1. Rush.
Leaves hairy (rarely glabrous). Leaves in section flat or V-shaped. Capsule 1-celled, with dissegments, 3-seeded	2. Wood-rush.

91. PIPEWORT FAMILY. { Perianth regular, calyx-like, inferior. Monocious. Perianth-lobes 4. Stamens 4. Style short, stigmas 2, long. Capsule 2-lobed, 2-celled, cells 1-seeded. Marsh plants, with radical leaves.

Flowers in heads, leaden colour. Male: Perianth 4-lobed, 2 inner lobes united nearly to the top. Female: Perianth 4-lobed, deeply divided. Leaves subulate	1. Pipewort.
--	---------------------

92. BULRUSH FAMILY. { Perianth none (reduced to hairs); or regular, calyx-like, inferior. Monocious or hermaphrodite. Perianth of 3 hairs, or 3 or 4 lobes. Stamens 3, united or free. Style 1. Fruit 1-celled, 1-seeded. Aquatic plants.

Flowers in cylindrical spikes. Stamens 3, united. Leaves linear, 3 to 6 feet long	1. Bulrush,
Flowers in globular heads; inflorescence simple or branched. Stamens 3, free. Leaves linear, 1 to 4 feet long	2. Reed-mace, Cat's-tail.
	2. Bur-reed.

93. ARUM FAMILY. { Perianth none; or regular, calyx-like, inferior. Monocious or hermaphrodite. Perianth-lobes 0 or 6. Stamens many, crowded, sessile; or 6 with free filaments. Stigma sessile. Berry a berry; 1-celled, 2- to 4-seeded; or 3-celled, cells many-seeded.

Spatha ventricose, contracted in the middle Spadix club-shaped; female flowers at base; male flowers a little above them. Perianth none. Leaves hastate. Berry 1-celled, 2- to 4-seeded. Spatha long, leaf-like. Spadix dense, lateral.	1. Cuckoo-pint, Lords and Ladies.
Perianth 6-lobed. Leaves long, linear. Berry 2- or 3-celled, cells many-seeded	2. Sweet Flag.

94. DUCKWEED FAMILY. { Flowers with or without spathes. Monocious. Perianth none. Stamens 1 or 2, with or without filaments. Style 1. Floating or submerged plants, with leaf-like fronds.

Fronds very small, sub-globose, rootless. Stamen 1; anther 1-celled, sessile. Spatha none	1. Wolfia.
Fronds obovate or elliptic-lanceolate, with roots beneath. Stamens 1 or 2, anthers 2-celled, with filaments. Spatha urn-shaped	2. Duckweed.

95. POTAMOGETONACEÆ.				
(♂ ♀)				1. ZANNICHELLIA.
				2. RUPPIA.
				3. POTAMOGÉTON.

96. NAIADACEÆ.				
				1. NÁIAS.
				2. ZOSTÉRA.

97. CYPERACEÆ.				
(♂ ♀)				1. CÁREX.
				2. KOBRÉSIA.
				3. SCHOÉNUS.
				4. CYPÉRUS.
				5. ERIOPHÓRUM.
				6. ELEÓCHARIS.
				7. RHYNCHOSPORA.
				8. BLYSMUS.
				9. SCIÉPUS.
				10. ISÓLEPIS.
				11. CLÁDIUM.

95. PONDWEED FAMILY.

Perianth regular, calyx-like, inferior; or none. Hermaphrodite or monococious. Stamens 4, 2, or 1; with or without filaments. Ovaries 4, distinct, stigmas sessile. Fruit 4 drupes or 4 nuts, each 1-seeded. Aquatic plants.

Monococious.

Stamen 1. Perianth in female, oblique, cup-shaped, in male wanting. Flowers axillary, sessile

Hermaphrodite.

Stamens 2, anthers nearly sessile. Perianth wanting.

Flowers usually 2, on an axillary peduncle

Stamens 4, anthers sessile. Perianth 4-lobed.

Flowers in spikes

1. **Horned-Pond-weed.**

2. **Tassel-Pond-weed.**

3. **Pondweed.**

96. NAIAD FAMILY.

Flowers in spathes or in the axils of the leaves. Monococious or dioecious. Perianth none. Stamen 1, with or without a filament. Style 1, stigmas 2 to 4. Fruit 1-celled, 1-seeded. Leaves linear. Aquatic plants.

Stamen 1, filament ultimately elongating. Style 1, stigmas 3 or 4.

Stamens and pistils solitary, in the axils of the leaves.

Leaves ternate or opposite

Stamen 1, sessile. Style 1, stigmas 2.

Stamens and pistils in 2 rows, on a spadix. L. alternate

1. **Naiad.**

2. **Grass-wrack.**

97. SEDGE FAMILY.

Flowers arranged in spikelets of imbricated bracts (glumes). Each flower in the axil of one glume; monococious or hermaphrodite. Stamens 3 or 2; anthers erect, entire at the apex. Style simple, bifid or trifid. Embryo enclosed within albumen. Stem solid, triangular or round. Sheath of leaf entire.

Flowers monococious.

Ovary enclosed in a vase-shaped tunic.

Stamens 3. Style 1, stigmas 2 or 3

Ovary partially enclosed in a scale.

Upper flowers male. Lower flowers female

Glumes in each spikelet arranged in 2 opposite rows.

Spikelets 2- to 4-flowered.

Stem round. Spikelets in terminal heads

Spikelets many-flowered.

Stem triangular. Spikelets in compound or simple umbels

Glumes in each spikelet imbricated all round the axis.

Bristles ultimately far exceeding the glumes.

Fruit trigonous.

Spikelets solitary or umbellate

Bristles not equalling the glumes.

Base of style dilated.

Spikelets terminal, solitary

Spikelets in clusters

Base of style filiform.

Spikelets in a terminal spike, arranged in 2 opposite rows

Spikelets in simple or compound clusters, umbels, or panicles

Bristles none.

Base of style filiform.

Spikelets 1 or 2 together, or in clustered globular heads

Base of style conical.

Spikelets in compound panicles

1. **Sedge.**

2. **Kobresia.**

3. **Bog-rush.**

4. **Galingale.**

5. **Cotton-grass.**

6. **Spike-rush.**

7. **Beak-rush.**

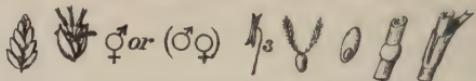

8. **Blysmus.**

9. **Club-rush.**

10. **Do.**

11. **Twig-rush.**

98. GRAMINEÆ.

1ST STYL. WITH 1 PERFECT FLOWER (OFTEN ACCOMPANIED BY 1 OR 2 RUDIMENTARY FLOWERS).

		<i>Low. pal.</i>			10. <i>ANTHOXANTHUM.</i>
					11. <i>GASTRIDÍUM.</i>

98. GRASS FAMILY.

Flowers arranged in spikelets composed of bracts (glumes and paleæ), imbricated in 2 opposite rows. Each flower enclosed in 2 bracts. Hermaphrodite or monœcious. Stamens usually 3 (rarely 1 or 6); anthers versatile, notched at both ends. Styles 2 (rarely 1 or 3), feathery. Embryo on the outside of albumen. Stem hollow and knotted. Sheath of leaf split.

1^{STLY} SPIKELETS WITH 1 PERFECT FLOWER (OFTEN ACCOMPANIED BY 1 OR 2 RUDIMENTARY FLOWERS).

Spikelets on a slender spike (not secund). Glumes* and lower (or outer) paleæ* both awnless. Spikelets quite imbedded in alternate sides of the rachis. Glumes equal. Spike cylindrical	1. Hard-grass.
Spikelets in an ovoid or cylindrical dense spike or spike-like panicle (not secund). Glumes awned. Lower (or outer) paleæ awned. Glume awl-shaped or lanceolate. Spike sub-cylindrical	2. Barley.
Glume ending in a long fringed bristle. Lower palea ending in 2 long bristles, and a dorsal-bent awn. Panicle spike-like, ovoid Glume notched, awned beneath the tip. Lower palea notched, awned beneath the tip. Panicle spike-like, cylindrical or branched..	3. { Hare's-tail-grass.
Lower (or outer) paleæ awnless. Glumes truncate with a short awn or seta. Panicle spike-like, ovoid or cylindrical	4. Beard-grass.
Glumes awnless. Lower (or outer) paleæ awnless. Glumes lanceolate. Panicle spike-like, ovoid or cylindrical	5. Cat's-tail-grass.
Glumes boat-shaped, strongly keeled. Panicle spike-like, ovoid	5. Do.
Spikelet dorsally compressed, surrounded by an involucre of bristles. Panicle spike-like, cylindrical..	6. Canary-grass.
Lower palea with a very short awn, and hairs at the base. Panicle spike-like, both ends tapered	7. Brittle-grass.
Lower (or outer) paleæ awned. Lower palea with a very short awn, and hairs at the base. Panicle spike-like, both ends tapered	8. Marram.
Glumes equal, or nearly so; more or less connate below. Palea 1, awned at the back. Styles long, connate below. Panicle spike-like, oblong or cylindrical	8. Do.
Glumes very unequal. Stamens 2. Panicle spike-like, tapering	9. Fox-tail-grass.
Glumes nearly equal, swollen and polished at the base. Panicle close spike-like	10. Vernal-grass.
	11. Nit-grass.

* The parts here called "glumes" are by some authors termed "barren glumes"; the "lower (or outer) paleæ," "flowering glumes"; and the "upper (or inner) paleæ," "paleæ."

	<i>Do.</i> 	<i>Up: Gl.</i>  + <i>Low: Gl.</i> 	24. CALAMAGROSTIS.	

Spikelets secund (on one side of rachis). Spike simple.	
Paleæ 2, lower tapering into a subulate point.	
Glume none. Style simple; stigma filiform, hairy	12. Mat-grass.
Paleæ 2 (or 1), scarious, very hairy.	
Glumes 2, blunt. Styles 2, long; stigmas slender, hairy	13. Chamagrostis.
Spikelets secund. Spikes digitate.	
Spikelets in two rows, on one side of a convex rachis.	
Glumes nearly equal, patent. Styles separate ..	14. {Dog's-tooth- grass.
Spikelets in unequally pedicelled pairs, on one side of the flattened rachis.	
Glumes very unequal, upper strongly veined, palea of sterile flower like upper glume. Styles terminal	15. Finger-grass.
Spikelets secund. Spikes 2- to many-branched.	
Spikes 2 to 8, erect.	
Glumes unequal, pointed. Styles united below ..	16. Cord-grass.
Spikes compound, secund in the whole, and in each part.	
Glumes very unequal, upper pointed or rigidly awned; lower or outer palea of sterile flower like upper glume. Styles separate	17. Panick-grass.
Spikelets in a lax panicle.	
Lower (or outer) paleæ awnless.	
Glumes none.	
Paleæ 2, like parchment, compressed, keeled ..	18. Cut-grass.
Glumes as long as the flowers.	
Glumes nearly equal, purple	19. Melick.
Glumes nearly equal, green..	20. Millet-grass.
Glumes longer than the flowers.	
Paleæ nearly equal, hairs at base. Styles long ..	21. Digraphis.
Paleæ unequal, hairs at base. Styles short ..	22. Bent-grass.
Lower (or outer) paleæ, awned.	
Lower palea with an awn once or twice its length.	
Upper glume smaller than the lower glume ..	22. Do.
Lower palea with an awn 3 to 4 times its length.	
Upper glume larger than the lower glume ..	23. Wind-grass.
Lower palea with an awn about $\frac{1}{2}$ its length, and hairs at the base.	
Upper glume nearly equal to the lower glume ..	24. Small-reed.

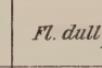

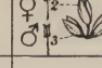

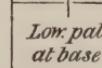

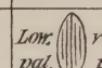

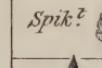

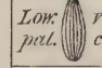

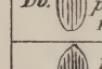

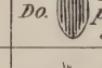

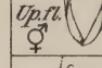

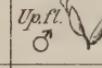

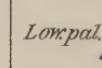

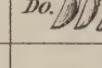

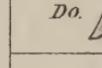

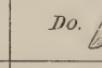

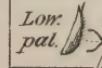

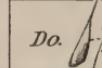

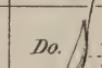

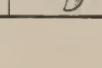

2^{NDLY}

WITH 2 TO 20 FLOWERS (SOMETIMES ONLY 1 PERFECT AND 1 OR 2 MALE FLOWERS)

**2^{NDLY} SPIKELETS WITH 2 TO 20 FLOWERS (SOMETIMES ONLY
1 PERFECT AND 1 OR 2 MALE FLOWERS).**

Spikelets clustered into an ovoid, or cylindrical, spike-like panicle.	
Styles long, filiform.	
Glumes nearly equal, toothed. Bracts rounded-heart-shaped	25. Moor-grass.
Styles feathery.	
Glumes unequal. Bracts none	26. { Crested Hair-grass.
Glumes nearly equal. Bracts comb-like	27. { Dog's-tail-grass.
Spikelets sessile, or nearly so, in a simple spike.	
Spikelets one in each notch, set edgewise to rachis.	
Spike secund.	
Bracts comb-like	27. Do.
Glume 1 only.	
Rachis deeply notched	28. { Darnel, Rye-grass.
Glumes 2.	
Lower (or outer) palea veins parallel	40. Sclerochloa.
Lower (or outer) palea veins converging	39. Fescue-grass.
Spikelets one in each notch, set with their breadth to rachis.	
Glumes nearly equal. Rachis deeply notched.	
Spikelets ovate-lanceolate	29. Wheat-grass.
Glumes unequal. Rachis not indented. Spikelets linear-lanceolate	30. { False Brome-grass.
Spikelets 2 (or 3) in each notch of the rachis.	
Glumes equal, as long as the flowers	31. Lyme-grass.
Spikelets in a secund raceme.	
Glumes as long as the flowers. Flowers 2, and 1 or 2 rudiments.	
Glumes purple. Lower (or outer) palea entire ..	19. Melick.
Spikelets in a racemose panicle.	
Glumes as long as the flowers. Flowers 3 or 4.	
Glumes green. Lower (or outer) palea notched ..	32. Heath-grass.

INDEX OF THE ORDERS AND GENERA.

Acer, 52	Aristolochia, 94	Camelina, 44
ACERACEÆ, 52, 18, 28	ARISTOLOCHIACEÆ, 94, 32	Campanula, 80
Aceras, 102	Armeria, 92	CAMPANULACEÆ, 80, 24
Achillea, 78	Armoracia, 44	CANNABINACEÆ, 98, 30
Aconitum, 40	Arnoseris, 74	CAPRIFOLIACEÆ, 70, 24
Acorus, 108	Arrhenatherum, 118	Capsella, 44
Actæa, 40	Artemisia, 76	Cardamine, 46
Actinocarpus, 104	Arthrobium, 56	Carduus, 76
Adiantum, 122	Arum, 108	Carex, 110
Adonis, 40	Asarum, 94	Carlina, 76
Adoxa, 70	ASPARAGACEÆ, 106, 34	Carpinus, 98
Ægopodium, 64	Asparagus, 106	Carum, 66
Æthusa, 68	Asperugo, 84	CARYOPHYLLACEÆ, 50, 22, 32
Agrimonia, 58	Asperula, 72	Castanea, 98
Agrostis, 114	Asplenium, 122	Catabrosa, 118
Aira, 118	Aster, 78	Caucalis, 64
Ajuga, 88	Astragalus, 56	CELASTRACEÆ, 54, 18
Alchemilla, 58	Astrantia, 64	Centaurea, 76
Alisma, 104	Athyrium, 122	Centranthus, 72
ALISMACEÆ, 104, 34, 36	Atriplex, 92	Centunculus, 90
Alliaria, 46	Atropa, 84	Cephalanthera, 102
Allium, 106	Avena, 118	Cerastium, 50
Alnus, 98	Azalea, 80	CERATOPHYLLACEÆ, 96, 30
Alopecurus, 112	Ballota, 88	Ceratophyllum, 96
Alsine, 50	BALSAMINACEÆ, 54, 22	Ceterach, 122
Althæa, 52	Barbarea, 46	Chærophylum, 64, 66
Alyssum, 44	Bartsia, 86	Chamagrostis, 114
AMARANTHACEÆ, 92, 32	Bellis, 78	Chara, 120
Amaranthus, 92	BIDENS, 76	CHARACEÆ, 120, 38
AMARYLLIDACEÆ, 104, 34	Blechnum, 122	Cheiranthus, 46
AMENTACEÆ, 98, 28	Blysmus, 110	Chelidonium, 42
Anacharis, 100	BORAGINACEÆ, 84, 26	CHENOPODIACEÆ, 92, 30, 32
Anagallis, 90	Borago, 84	Chenopodium, 92
Anchusa, 84	Botrychium, 122	Cherleria, 50
Andromeda, 80	Brachypodium, 116	Chlora, 82
Anemone, 40	Brassica, 46	Chrysanthemum, 78
Angelica, 68	Briza, 118	Chrysosplenium, 62
Antennaria, 76	Bromus, 118	Cicendia, 82
Anthemis, 78	Bryonia, 60	Cichorium, 74
Anthoxanthum, 112	Bupleurum, 64	Cicuta, 66
Anthyllis, 56	Butomus, 104	Circæa, 60
Antirrhinum, 86	Buxus, 96	CISTACEÆ, 48, 18, 20, 22
Apera, 114	Cakile, 44	Cladium, 110
Apium, 66	Calamagrostis, 114	Claytonia, 62
APOCYNACEÆ, 82, 26	Calamintha, 88	Clematis, 40
AQUIFOLIACEÆ, 80, 26	CALLITRICHACEÆ, 96, 30	Cochlearia, 44
Aquilegia, 40	Callitricha, 96	Colchicum, 108
Arabis, 46	Calluna, 80	Comarum, 58
ARACEÆ, 108, 32, 34, 36	Caltha, 40	COMPOSITÆ, 74, 24
Arbutus, 80		CONIFERAÆ, 100, 28
Arctium, 76		Conium, 66
Arctostaphylos, 80		
Arenaria, 50		

Convallaria, 106	Epimedium, 42	Helosciadium, 66
CONVOLVULACEÆ, 82, 26	Epipactis, 102	Heracleum, 68
Convolvulus, 82	Epipogum, 102	Herminium, 102
Corallorrhiza, 102	EQUISETACEÆ, 120, 38	Herniaria, 62
Coriandrum, 68	Equisetum, 120	Hesperis, 46
CORNACEÆ, 70, 24	Eranthis, 40	Hieracium, 74
Cornus, 70	Erica, 80	Hierochloe, 118
Corrigiola, 62	ERICACEÆ, 80, 22, 24, 26	Hippocrepis, 56
Corydalis, 42	Erigeron, 78	Hippophaë, 94
Corylus, 98	ERIOCAULACEÆ, 108, 36	Hippuris, 60
Corynephorus, 118	Eriocalon, 108	Holcus, 118
Cotoneaster, 58	Eriophorum, 110	Holosteum, 50
Cotyledon, 62	Erodium, 52	Honkeneya, 50
Crambe, 44	Eryngium, 64	Hordeum, 112
CRASSULACEÆ, 62, 20, 26	Erysimum, 46	Hottonia, 90
Crataegus, 58	Erythraëa, 82	Humulus, 98
Crepis, 74	Euonymus, 54	Hutchinsia, 44
Crithmum, 68	Eupatorium, 76	HYDROCHARIDACEÆ, 100,
Crocus, 104	Euphorbia, 96	34
CRUCIFERÆ, 44, 20	EUPHORBIACEÆ, 96, 28, 32	Hydrocharis, 100
Cryptogramme, 122	Euphrasia, 86	Hydrocotyle, 64
CUCURBITACEÆ, 60, 24, 32	Fagopyrum, 94	Hymenophyllum, 122
Cuscuta, 82	Fagus, 98	Hyoscyamus, 84
Cyclamen, 90	Festuca, 116, 118	HYPERICACEÆ, 52, 18, 22
Cynodon, 114	Filago, 76	Hypericum, 52
Cynoglossum, 84	FILICES, 122, 38	Hypochaëris, 74
Cynosurus, 116	Fœniculum, 68	Iberis, 44
CYPERACEÆ, 110, 36	Fragaria, 58	Ilex, 80
Cyperus, 110	Frankenia, 48	Illecebrum, 62
Cypripedium, 102	FRANKENIACEÆ, 48, 20	Impatiens, 54
Cystopteris, 122	Fraxinus, 82	Inula, 78
Dactylis, 118	Fritillaria, 106	IRIDACEÆ, 104, 34
Daphne, 94	Fumaria, 42	Iris, 104
Datura, 84	FUMARIACEÆ, 42, 20	Isatis, 44
Daucus, 64	Gagea, 106	Isnardia, 60
Delphinium, 40	Galanthus, 104	ISOCHTES, 120
Dentaria, 46	Galeopsis, 88	Isolepis, 110
Dianthus, 50	Galinsoga, 78	Jasione, 80
Digitalis, 86	Gonium, 72	JASMINACEÆ, 82, 26, 28
Digitaria, 114	Gastridium, 112	JUNCACEÆ, 108, 36
Digraphis, 114	Genista, 56	Juncus, 108
DIOSCOREACEÆ, 100, 32, 34	Gentiana, 82	Juniperus, 100
Diotis, 76	GENTIANACEÆ, 82, 26	Knautia, 72
Diplotaxis, 46	GERANIACEÆ, 52, 22	Kobresia, 110
DIPSACACEÆ, 72, 24	Geranium, 52	Kœleria, 116
Dipsacus, 72	Geum, 58	LABIATÆ, 86, 26
Doronicum, 78	Gladiolus, 104	Lactuca, 74
Draba, 44	Glaucium, 42	Lagurus, 112
Drosera, 48	Glaux, 90	Lamium, 88
DROSERACEÆ, 48, 20	Glyceria, 118	Lapsana, 74
Dryas, 58	Gnaphalium, 76	Lastrea, 122
Echinochloa, 114	Goodyera, 102	Lathraea, 86
Echium, 84	GRAMINEÆ, 112, 36	Lathyrus, 56
ELÆAGNACEÆ, 94, 28	Gymnadenia, 102	Lavatera, 52
ELATINACEÆ, 48, 22	Gymnogramme, 122	Leersia, 114
Elatine, 48	Habenaria, 102	LEGUMINOSÆ, 56, 18, 20
Eleocharis, 110	HALORAGACEÆ, 60, 24, 30	Lemna, 108
Elymus, 116	Hedera, 70	LEMNACEÆ, 108, 30, 36
EMPETRACEÆ, 96, 18, 28	HEDERACEÆ, 70, 24, 28	LENTIBULARIACEÆ, 90, 26
Empetrum, 96	Helianthemum, 48	Leontodon, 74
Endymion, 106	Helleborus, 40	Leonurus, 88
Epilobium, 60	Helminthia, 74	Lepidium, 44

	Torilis, 64	Zostera, 110

INDEX OF THE ENGLISH NAMES.

Adder's-tongue, 123	Bird's-foot, 57	Bur-Marigold, 77
Agrimony, 59	Bird's-foot Trefoil, 57	Burnet-Saxifrage, 67
Alder, 99	Bird's-nest, 103	Bur-reed, 109
Alexanders, 65	BIRTHWORT FAM., 95, 33	Butcher's Broom, 107
Alkanet, 85	Birthwort, 95	Butterbur, 77
All-seed, 55	Bishop's-weed, 65	BUTTERCUP FAM., 41, 21,
Alyssum, 45	Bistort, 95	33
AMARANTH FAM., 93, 33	Bitter-cress, 47	Buttercup, 41
Amaranth, 93	Bitter Vetch, 57	BUTTERWORT FAM., 91,
Anemone, 41	Blackberry, 59	27
Angelica, 69	Black Bryony, 101	Butterwort, 91
Apple, 59	— Horehound, 89	Cabbage, 47
Arrow-grass, 105	— Saltwort, 91	Calamint, 89
Arrow-head, 105	Bladder-fern, 123	Campion, 51
ARUM FAM., 109, 33, 35, 37	Bladder-nut, 55	Canary-grass, 113
Asarabacea, 95	Bladder-seed, 67	Candy-tuft, 45
Ash, 83	Bladderwort, 91	Caraway, 67
ASPARAGUS FAM., 107, 35	Blinks, 63	Carline Thistle, 77
Asparagus, 107	Blue-bell, 107	Carnation, 51
Astrantia, 65	Blue-eyed-grass, 105	Carrot, 65
Avens, 59	Blue Sowthistle, 75	Catchfly, 51
Awl-wort, 45	Blysmus, 111	CATKIN FAM., 99, 29
Azalea, 81	Bog-Asphodel, 109	Cat-Mint, 89
Bald-money, 69	Bogbean, 83	Cat's-ear, 75
Balm, 89	Bog-myrtle, 99	Cat's-tail, 109
BALSAM FAM., 55, 23	Bog Orchis, 103	Cat's-tail-grass, 113
Balsam, 55	Bog-rush, 111	Celandine, 43
Bane-berry, 41	BORAGE FAM., 85, 27	Celery, 67
BARBERRY FAM., 43, 19, 21	Borage, 85	Centaury, 83
Barberry, 43	Box, 97	Cephalanthera, 103
Barley, 113	Box-thorn, 85	Chaffweed, 91
Barrenwort, 43	Bracken, 123	Chamagrostis, 115
Bartsia, 87	Brake, 123	Chamomile, 79
Basil, 89	Bramble, 59	CHARA FAM., 121, 39
Bastard Balm, 89	Brandy-bottle, 43	Chara, 121
— Pimpernel, 91	Bristle-fern, 123	Cherry, 59
— Toad-flax, 95	Brittle-grass, 113	Chervil, 65, 67
Beak-rush, 111	Brome-grass, 119	Chestnut, 99
Bearberry, 81	Brook-weed, 91	Chickweed Winter-
Beard-grass, 113	Broom, 57	green, 91
Bear's-foot, 41	BROOMRAPE FAM., 87, 27	Chicory, 75
Bedstraw, 73	Broomrape, 87	Cinque-foil, 59
Beech, 99	Bryony, 61	Claytonia, 63
Beet, 93	Buckbean, 83	Clover, 57
BELL-FLOWER FAM., 81, 25	BUCKTHORN FAM., 55, 19, 29	CLUB-MOSS FAM., 121, 39
Bell-flower, 81	Buckthorn, 55	Club-moss, 121
Bent-grass, 115	Buck-wheat, 95	Club-rush, 111
Bilberry, 81	Bugle, 89	Cock's-foot-grass, 119
Bindweed, 83	Bugloss, 85	Cock's-head, 57
Birch, 99	BULRUSH FAM., 109, 37	Colt's-foot, 79
	Bulrush, 109	Columbine, 41
	Burdock, 77	Comfrey, 85
		COMPOSITE FAM., 75, 25

CONVOLVULUS FAM., 83, 27	Epipogum, 103	GOOSEFOOT FAM., 93, 31,
Convolvulus, 83	Eryngo, 65	33
Coralroot, 103	Evening Primrose, 61	Goosefoot, 93
Coralwort, 47	Everlasting, 77	Gorse, 57
Cord-grass, 115	Everlasting Pea, 57	GOURD FAM., 61, 25, 33
Coriander, 69	Eye-bright, 87	Gout-weed, 65
Corn-salad, 73	False Brome-grass, 117	Grape-Hyacinth, 107
Corydal, 43	Featherfoil, 91	GRASS FAM., 113, 37
Cotoneaster, 59	Fennel, 69	Grass of Parnassus, 63
Cotton-grass, 111	Fen Orchis, 103	Grass-wrack, 111
Cotton Thistle, 77	Fenugreek, 57	Gray's-hair-grass, 119
Cotton-weed, 77	FERN FAM., 123, 39	Great Burnet, 59
Cowbane, 67	Fern-royal, 123	Gromwell, 85
Cow-parsnip, 69	Fescue-grass, 117, 119	Ground-Ivy, 89
Cow-wheat, 87	Feverfew, 79	Guerder-rose, 71
Cranberry, 81	Field Madder, 73	Gymnogram, 123
Crane's-bill, 53	— Scabious, 73	Hair-grass, 119
Cress, 45	FIGWORT FAM., 87, 27	Hard-fern, 123
Crested Hair-grass, 117	Figwort, 87	Hard-grass, 113
Crocus, 105	Filmy-fern, 123	Hare's-ear, 65
CROWBERRY FAM., 97, 19, 29	Finger-grass, 115	Hare's-tail-grass, 113
Crowberry, 97	Fir, 101	Hart's-tongue, 123
Crowfoot, 41	Flag, 105	Hartwort, 65, 69
CRUCIFER FAM., 45, 21	FLAX FAM., 55, 23	Hawkbit, 75
Cuckoo-pint, 109	Flax, 55	Hawk's-beard, 75
Cudweed, 77	Fleabane, 79	Hawkweed, 75
CURRANT FAM., 63, 25	Fleawort, 79	Hawthorn, 59
Currant, 63	Fleur de Lis, 105	Hazel, 99
Cut-grass, 115	Flowering-fern, 123	Heartsease, 49
Cyphel, 51	Flowering-rush, 105	HEATH FAM., 81, 23, 25, 27
DAFFODIL FAM., 105, 35	Fool's Parsley, 69	Heath, 81
Daffodil, 105	Forget-me-not, 85	Heath-grass, 117
Daisy, 79	Foxglove, 87	Hedge-garlic, 47
Dame's Violet, 47	Fox-tail-grass, 113	Hedge-mustard, 47
Dandelion, 75	Fragrant Orchis, 103	Hedge-parsley, 65
DAPHNE FAM., 95, 29	Fritillary, 107	Hellebore, 41
Darnel, 117	FROG-BIT FAM., 101, 35	Helleborine, 103
Deadly Nightshade, 85	Frog-bit, 101	Hemlock, 67
Dead-nettle, 89	Frog Orchis, 103	—, Water, 67
Diaphysis, 115	FUMITORY FAM., 43, 21	Hemp-Agrimony, 77
DOCK FAM., 95, 31	Fumitory, 43	Hemp-nettle, 89
Dock, 95	Furze, 57	Henbane, 85
Dodder, 83	Galingale, 111	Hen's-foot, 65
Dog's-tail-grass, 117	Galinsoga, 79	Herb Christopher, 41
Dog's-tooth-grass, 115	Garlic, 107	HERB-PARIS FAM., 101, 33, 35
Dogwood FAM., 71, 25	GENTIAN FAM., 83, 27	Herb-Paris, 101
Dogwood, 71	Gentian, 83	Hog's-fennel, 69
Dropwort, 59	Gentianella, 83	Hog-weed, 69
DUCKWEED FAM., 109, 31, 37	GERANIUM FAM., 53, 23	HOLLY FAM., 81, 27
Duckweed, 109	Germander, 89	Holly, 81
Dwale, 85	Gipsy-wort, 89	Holosteum, 51
Dwarf Nipplewort, 75	Gladiolus, 105	Holy-grass, 119
Dyer's Greenweed, 57	Glasswort, 93	Honewort, 67
Earth-nut, 67	Globe-flower, 41	HONEYSUCKLE FAM., 71, 25
Elder, 71	Goat's-beard, 75	Honeysuckle, 71
Elecampane, 79	Golden-rod, 79	HOP FAM., 99, 31
ELM FAM., 99, 29	Golden Samphire, 79	Hop, 99
Elm, 99	— Saxifrage, 63	Horehound, Black, 89
Enchanter's Nightshade, 61	Goldilocks, 77	—, White, 89
	Gold of Pleasure, 45	
	Goodyera, 103	
	Gooseberry, 63	

Hornbeam, 99	MADDER FAM., 73, 25	Mudwort, 87
Horned Pondweed, 111	Madder, 73	Mullein, 87
— Poppy, 43	Madwort, 85	Musk Orchis, 103
HORNWORT FAM., 97, 31	Maiden-hair, 123	Mustard, 47
Hornwort, 97	MALLOW FAM., 53, 19, 23	NAIAD FAM., 111, 37
Horse-radish, 45	Mallow, 53	Naiad, 111
Horseshoe Vetch, 57	Man Orchis, 103	Narcissus, 105
HORSETAIL FAM., 121, 39	MAPLE FAM., 53, 19, 29	Navelwort, 63
Horsetail, 121	Maple, 53	Needle Whin, 57
Hound's-tongue, 85	MARE'S-TAIL FAM., 61, 25, 31	Neotinea, 103
Houseleek, 63	Mare's-tail, 61	NETTLE FAM., 97, 31
Hutchinsia, 45	Marjoram, 89	Nettle, 97
Illecebrum, 63	Marram, 113	NIGHTSHADE FAM., 85, 27
Insect Orchis, 103	Marsh Cinque-foil, 59	Nightshade, 85
IRIS FAM., 105, 35	Marsh-mallow, 53	Nipplewort, 75
Iris, 105	Marsh Marigold, 41	Nit-grass, 113
Isardia, 61	Marsh Samphire, 93	Oak, 99
Ivy FAM., 71, 25, 29	Marsh-wort, 67	Oat, 119
Ivy, 71	Mat-grass, 115	Oat-grass, 119
JACOB'S LADDER FAM., 83, 27	May, 59	Orache, 93
Jacob's Ladder, 83	Meadow-grass, 119	ORCHIS FAM., 103, 35
JESSAMINE FAM., 83, 27, 29	Meadow-rue, 41	Orchis, 103
Juniper, 101	MEADOW-SAFFRON FAM., 109, 35	—, Bog, 103
Kidney-vetch, 57	Meadow-saffron, 109	—, Fen, 103
Knapweed, 77	Meadow-sweet, 59	—, Fragrant, 103
Knawel, 63	Medick, 57	—, Frog, 103
Knot-grass, 95	Medlar, 59	—, Insect, 103
Kobresia, 111	Melick, 115, 117	—, Man, 103
LABIATE FAM., 89, 27	Melilot, 57	—, Musk, 103
Lady-fern, 123	Menziesia, 81	Orpine, 63
Lady's Finger, 57	Mercury, 97	Ox-eye Daisy, 79
Lady's Mantle, 59	Meu, 69	Ox-tongue, 75
Lady's-slipper, 103	Mezereon, 95	Oxytropis, 57
Lady's-tresses, 103	MIGNONETTE FAM., 49, 21	Oyster-plant, 85
Lamb's Lettuce, 73	Mignonette, 49	Paddock-pipes, 121
Larkspur, 41	Milk Thistle, 77	Paeony, 41
Lavender-grass, 119	Milk-vetch, 57	Panick-grass, 115
Leopard's-bane, 79	MILKWORT FAM., 49, 23, 27	Pansy, 49
Lesser Burnet, 59	Milkwort, 49	PARONYCHIA FAM., 63, 23, 31, 33
Lettuce, 75	Millefoil, 79	Parsley, 67
LILY FAM., 107, 35	Millet-grass, 115	Parsley-fern, 123
Lily, 107	Mint, 89	Parsnip, 69
Lily of the Valley, 107	MISTLETOE FAM., 71, 25, 29	PEAFLOWER FAM., 57, 19, 21
LIME FAM., 53, 19	Mistletoe, 71	Pear, 59
Lime, 53	Moenchia, 51	Pearl-wort, 51
Limnanth, 83	Moneywort, 87	Pellitory, 97
Linden, 53	Monkey-flower, 87	Penny Cress, 45
Ling, 81	Monk's-hood, 41	Penny-wort, 65
Linnæa, 71	Moonwort, 123	Pepper Saxifrage, 69
Lobelia, 81	Moor-grass, 117	Pepperwort, 45
LOOSESTRIFE FAM., 61, 23, 33	Moschatel, 71	PERIWINKLE FAM., 83, 27
Loosestrife, 91	Motherwort, 89	Periwinkle, 83
—, Purple, 61	Mountain Avens, 59	Persicaria, 95
Lords and Ladies, 109	— Sorrel, 95	Pheasant's-eye, 41
